UNMATCHED CAPABILITIES FROM TWO OUTSTANDING DIVISIONS

TRANFORMER ENGINEERS FROM 10 MILLIWATTS

TRANSFORMERS UNLIMITED TO 500 KVA IN SIZE

TRANSFORMER ENGINEERS, a 30 year old specialty transformer manufacturer, has merged with TRANSFORMERS UNLIMITED to form two divisions of CONSOLIDATED TRANSFORMERS UNLIMITED. These two divisions are capable of manufacturing transformers and power supplies from 10 milliwatts to over 500 KVA in size. With this wide range of capability, Consolidated Transformers can now meet more customer requirements than any other manufacturer in the industry.

Transformer Engineers has designed a new line of low cost, highly efficient lightweight transformers called **Micro Mini's.** These small, tough, versatile plug-in transformers are ideal for transistor circuitry and many types of power, pulse and audio inductor applications. The units are especially adaptable to the new IC Age of Micro Electronics. **Specifications:** MIL-T-27B, Grade 5, Class S • Weight .06 ounces • .038 cubic inches in size • −195°C to −130°C • Leads .025 inch Type 'A' Nickel.

Terminal Configurations

Transformer Engineers, the West's largest manufacturer of Constant Voltage Transformers, now offers a complete line of CVT's using cruciform type laminations giving better regulation, lower price and greater dependability. **TE** constant voltage transformers maintain output voltages within less than 1% with input voltage fluctuations of ±15%. **TE** can design your special requirements quickly in any step-up or step-down ratio of voltage-to-current within the desired VA rating with single or multiple secondaries.

TRANSFORMERS UNLIMITED has the experience and the facilities to design and build some of the very largest requirements for plate supply, impedance matching, filament, reactors, step-up and step-down transformers.

TE and **TU's** engineering staff can design any special requirements you might have for precision ratio and reference transformers: Class U high temperature transformers, inverters, DC-DC converters, pulse transformers, magnetic amplifiers, wide band transformers, box shield transformers.

TRANSFORMER ENGINEERS is QPL approved to produce transformers to MIL-T-27-C and has a complete environmental test facility to qualify even the most difficult magnetic components.

POWER SUPPLIES — look to **TE** and **TU** for your complete custom power supply requirements — call or write today for your **free** catalog outlining our complete capabilities.

(*) Customer may choose any voltage needed and insert that value behind the VA of the part number — Example: 25 VA CVT would be ordered by TEC-2**515** for 15VDC output.

(**) User net in 25-49 quantities . . . contact your local representative or factory for larger quantity discounts and detailed mounting dimensions.

Custom Transformers at the Speed of Stock!

Why is this 89c Dynamic transformer better than this 95c stock transformer?

In addition to the obvious advantages this superior Dynamic transformer can be made to your specifications in DAYS instead of MONTHS and — in most cases — there is NO COST for prototypes!

Transformers for all reasons

- ☐ Patented, U/L Listed
- ☐ Internal or External
- ☐ Wall-Mounted
- ☐ Fast-Charging
- ☐ Power Conversion
- ☐ Conversion/Charging
- ☐ Printed Circuit
- ☐ Sub-Miniature
- ☐ Ferro-resonant
- ☐ Multi-Input
- ☐ Multi-Output

The Transformation of Power

This unique brochure explains the many advantages and application possibilities of Dynamic's patented, U/L listed transformers, converters, chargers and power supplies. Swift reading, amply supported by illustrations, photos and schematics. To obtain your free copy send a letterhead request.

Please judge us by the companies we keep . . .

MINIATURE TRANSFORMERS

Extremely small rectifier transformers with single or duel secondary winding for electronic designers who wish to design their own solid state power supplies. 115 volt A.C. input, 55-450 cycles ratings below give D.C. outputs for rectifier circuits with condenser input.

SUBMINIATURE UNITS

Channel-frame (1⅜"x1⅛"x1"W).

Model	Sec. D.C., Volts	Sec. D.C., Current	Price
SM-1	10	80ma	$10.00

DESIGN INFORMATION

CENTER TAP — All units are center tapped. The ratings, therefore, are for a full-wave circuit. SM-7 thru 10, R-9 thru R-18, I-10 thru I-15, S-9 thru S-13, CM-6 thru CM-11, H-9 thru H-20, RT-6 thru RT-10 are not center tapped and are designed for a bridge circuit.

TEST VOLTAGE — 1000 V., D.C. between primary and secondary, and between secondary windings.

INSULATION — Nylon bobbin; insulating paper between each layer.

LEADS — Flexible leads rated for 105°C.

DUAL SECONDARIES — Transformers shown with two output units give indicated current from each tap.

All transformers listed may be wound for 220 v.a.c. input.

ALL TRANSFORMERS MAY BE WOUND WITH ELECTRO STATIC SHIELDS.

SEE SECTION 4000 FOR COMPLETE LIST OF FERROTRAN SOLID STATE POWER SUPPLIES

HIGH CURRENT UNITS

IR	115	14	10.00

ENCASED TRANSFORMERS

All listed transformers are available fully encapsulated in a MIL-T-27 can.

The cost of such units is an additional $11.00 for single secondary transformers and $13.00 additional for dual secondary units.

Standard connectors are of the hooked solder pin type (0.900" in dia.), mounted dead center on the stud side of the case.

Case types are as follows:

Series	Case	Size
SM	AH	1 5/16"x1 5/16"x1¼"
R	AJ	1⅝"x1⅝"x2⅜"
I	AJ	1⅝"x1⅝"x2⅜"

FERRODYNE . . . ADVANCED STATE OF THE ART

Highly sophisticated specialty Transformers, Inductors, and Associated Magnetic Components.

FERRODYNE products are keyed to those segments of the electronics industry that are primarily concerned with high quality, strict specifications, and advanced state of the art products.

Since 1961, the FERRODYNE CORPORATION has been an industry leader in the development of micro-miniature, low profile, and high frequency transformers and inductors for the Computer, Communications, and Electronic Instrument Industries. FERRODYNE products range from highly sophisticated ¼″ cube transformers and inductors to five (5) kilowatt components; frequencies to 50 megahertz; construction categories cover the entire range from open type to hermetically sealed; quality assurance is in accordance with Mil-Q-9858A. The FERRODYNE CORPORATION manufactures magnetic components in compliance with U.L. standards for computer and instrument manufacturers and is also Q.P.L. listed.

Contact FERRODYNE for prompt and efficient engineering assistance with your specialty transformer requirement. FERRODYNE provides quick service on special prototype units. We welcome your inquiries.

FERRODYNE MICRO-MINIATURE AND MINIATURE TRANSFORMERS AND INDUCTORS

The FMM, FMA, and FMC SERIES of transformers and inductors are micro-miniature and miniature HI-REL units especially suited for printed circuit board applications. Coils are wound on slotted bobbins that permit complete penetration of epoxy resin into the coil interior. All leads are fatigue resistant nickel alloy, gold plated to Mil-G-45204, Class 1 specification (weldable or solderable termination). Special finishing techniques are used, and every unit is stress-relieved and temperature cycled to assure the highest quality performance.

Additional Engineering data available upon request.

FMA SERIES MICRO-MINIATURE TRANSFORMERS AND INDUCTORS

- Available from stock
- Size .475″ high x .310″ wide x .410″ long
- Weight 1/10 oz.
- Frequency range 300 HZ to 120 KHZ
- Mil-T-27C, Grade 5, Class S
- All leads separated in increments of 1/10″
- Complete circuit data on each unit
- 500 RMS test voltage

FMA-1 SERIES MICRO MINIATURE LOW PROFILE, OPEN TYPE VERSION OF FMA UNITS

- 2-4 weeks delivery
- Size .25″ high x .35″ wide x .375″ long
- Mil-T-27C, Grade 6, Class S
- No. 28 leads (Max. number of leads 6) for Printed Circuit application

FMA-2 SERIES MICRO MINIATURE LOW PROFILE, SOLID EPOXY MOLDED VERSION OF FMA UNITS

- 2-4 weeks delivery
- Size .30″ high x .40″ wide x .40″ long
- Mil-T-27C, Grade 5, Class S
- 12 Pin capacity

FMC SERIES MINIATURE TRANSFORMERS AND INDUCTORS

- 2-4 weeks delivery
- Size .630″ x .530″ x .52″ high
- Weight 7 grams
- Frequency range 300 Hz to 50 KHz
- Mil-T-27C, Grade 5, Class S
- All leads separated in increments of 1/10″
- Complete circuit data on each unit
- 500 RMS test voltage
- Ten lead capacity

4240 GLENCOE AVENUE / VENICE, CA 90291 / (213) 391-5233

FCV-200 SERIES—Constant Voltage Transformers (available from stock) Low Profile / Smaller / Advanced Design

Combines both low profile advantages and standard multi-selectable output features to provide the user the optimum application advantages at competitive prices. 70% of the ampere capacity of each unit is available at either plus or minus 5VDC. The 30% balance of power available can be supplied at either plus or minus 12, 15, or 24 VDC. Primary voltage is 95-130V, 1 phase, 60 Hz. The most commonly used sizes are:

Part No.	Watt Rating	H	W	L
FCV-210	25	3⅛	3¾	4
FCV-220	75	3⅝	5	4½
FCV-230	100	3⅝	5	5
FCV-240	250	5¼	5¾	5
FCV-250	500	5¼	5¾	7⅜

Other standard voltages and ampere ratings are available.

The Ferrodyne Corporation also supplies the computer industry with large numbers of custom designed constant voltage transformers. Contact the Ferrodyne Corporation for quick, efficient and competitive engineering services and quotations regarding your constant voltage requirements.

Dressen-Barnes Electronics Corporation, the parent company of Ferrodyne Corporation, is developing a line of Constant Voltage Power Supplies. Information on this line can be obtained through Ferrodyne or by contacting Dressen-Barnes at 250 N. Vinedo Avenue, Pasadena, California 91107. Telephone: (213) 681-0643, TWX: 213-449-2556.

FIS/FPS SERIES—Box Shielded Instrument and Power Transformers

FIS Box Shielded Instrument Transformers are designed for two distinctly different application requirements. The Ferrodyne FIS Series units are designed primarily for use in the instrumentation field, and have many outstanding features generally considered difficult to meet by most competitors. Some of these features are:

- Double box shielded primary and single box shielded secondary windings result in a low winding to winding capacitance or .05PF max.
- Encased in three high permeability cans, shielding is a minimum of 90DB.
- Low microphonic construction.
- Common mode reduction will exceed 140DB.
- Low thermal construction.
- Frequency response = 5 Hz to 8 KHz @ 25 mv level.
- Insulation resistance is 10,000 Meg. ohms @ 500VDC.
- Impedance characteristics are as follows:

Typical units are:

Part No.	Primary	Secondary
FIS-1	100K ohm Ct	320K ohm
FIS-2	320K ohm Ct	320K ohm
FIS-3	100K ohm Ct	100K ohm
FIS-4	320K ohm Ct	100K ohm

Dimensions are 1-11/16" high x 1¾" wide x 1-7/16" deep.

FPS—The Ferrodyne FPS Series is designed for application where a high degree of isolation is required from the noise generated in the line. Some of the outstanding features are:

- Single box shielded primary and double box shielded secondary result in a primary to secondary winding capacitance of .03PF max.
- Common mode rejection will exceed 140DB.
- Operating frequency is 50/60 Hz.
- Insulation resistance is 10,000 Meg ohms min.
- Designed at low operating flux density with grain oriented silicon steel to reduce the magnetic flux radiation.
- Open construction with shield cable leads treated and coated with epoxy.

Typical units are:

Part No.	Prim.	Sec.	H	W	D	Lbs.
FPS-50	115V	40V @ 20MA	1⅝	1-5/16	1½	0.4
FPS-51	115V	115V @ 2MA	1⅝	1-5/16	1½	0.4
FPS-52	115V	115V @ .2A	3	2-½	2¼	2
FPS-53	115V	115V @ 1A	3¾	3-⅛	3½	6.3

The units described above are typical, but it doesn't cost any extra to have Ferrodyne design specifically for your application. Contact us for quick, efficient and competitive engineering services and quotations. Ferrodyne is one of the largest suppliers of box shielded transformers in the West. We welcome your inquiries.

FST SERIES—Precision Scott-T Transformers

For applications from resolver to syncro; or from syncro to resolver. Mil-T-27C, grades 5 and 6, class S. Designed to meet the most stringent requirements such as:

- D.C. resistance balance to within 5%.
- Minimum phase shift down to ½ min.
- Transformation accuracy with .05%.
- Input impedance up to 1 megohm.
- Frequencies from 60 Hz to 1 KHz.

Part No.	Hz	L to L	E out	Z in	M. V. Null	Acc. Arc. in.
FST-1	60/400	78/11.8	6.4	100K min.	< 4	.03°
FST-2	400	90	6.4	200K min.	<10	.03°
FST-3	400	11.8	5	100K	< 1	.03°
FST-4	400	90	4.25	1 meg.	< 1	.03°

Contact the Ferrodyne Corporation for quick, efficient and competitive engineering services and quotations.

FIC SERIES—Inverter/Converter Transformers

The Ferrodyne inverter and converter toroidal transformers are ideal for use where low voltage DC power must be converted to high efficiency, high voltage DC. The Transformers are epoxy molded under vacuum to eliminate moisture and increase unit ruggedness. The FIC Series exceed Mil-T-27C, grade 5, class R specifications. Frequencies to 10 KHz. Inverter circuit information can also be supplied by Ferrodyne Engineering. For specific application please contact the factory. Units are available upon request in metal enclosures to minimize flux radiation.

† 10-32 x ½ stud mounting.
* D.C. output is rated out of the rectifier for full wave bridge, if using full wave center reduce the output ½.

FSI SERIES—Switching Regulator Inductors

This Series is specifically designed for application in switching regulated power supplies operating at frequencies above 1KHz, constructed to meet high "Q" requirements with a minimum of R.F.I. and flux radiation. The F.S.I. Series uses cold rolled steel cases with fused tin plating. Center hold mounting is provided by through hole.

Typical Switching Regulator Inductors:

L	I D.C.	D.C.R. ohms	O.D.	Height
6½ Mhy	100 Ma	2	1⅛	½
4 Mhy	250	1.3	1⅛	½

Transformers meeting MIL-T-27C specifications Grade 1 through 6 with temperature char teristics of Class S, T, or U can be supplied on special order.
Encapsulated units using either Epoxy-Resins or Fosterite can be supplied for Grade 2 and Class U components can be supplied molded in special high temperature Freed resin.

TERMINAL ENCLOSURE KITS

Economical modification kits convert exposed-terminal models to enclosed ones. To order determine frame size and number of cores of selected transformer, determine appropriate Terminal Kit Model Number based on frame size from table at right, and order for each transformer the same quantity of Terminal Kits as there are cores.

For Frame Size	Model No.	Sugg'd Net Price[2]
30	None Available	.....
40	None Available	.....
50	9T92A903	$1.00
60	9T92A903G2	1.00
75	9T92Y903G3	2.00
85	9T92Y903G4	4.00
95	9T92Y903G5	7.00

(1) Also overvoltage connection amp. When overvoltage connection is used, rated current should not be exceeded. Output kva for overvoltage connection is maximum output voltage times rated current.

(2) OEM quantity prices are available on request.

(3) Output at overvoltage connection is 0.264 volts or 0-132 volts.

(4) No overvoltage protection provided.

(5) When using extended tap connections, operation is for 60 hertz only.

(6) 60 hertz only.

(7) When operated with this input voltage, rated current must be reduced when output voltage exceeds 140 percent of input voltage.

(8) For 240-volt input, 0-240-volt output, application only.

(9) For 480-volt input, 0-480-volt output application only.

PLUG-IN SETS

Bench or wall-mounted single-phase units for laboratory or shop source of adjustable a-c voltage. Provides output voltage of 0-117% of input voltage, but is easily reconnectible for 0-100%.

Rated Amp	Fuse Rating, Amp	Frame Size (All have 1 Core)	Model Number	Sugg'd Net Price[2]	Receptacle Configuration

Fig. 2

Fig. 3

[10] Output range 0-132 volts.
[11] 60 Hz only when connected for 0-117% line voltage output.
[12] Reconnectible for 120-volt input, with derating required.

Prices subject to change without notice.

For complete information contact nearest GE Sales Office listed on inside front cover, or write to General Electric Co., Section 998-88, Schenectady, N. Y. 12305.

GENERAL ELECTRIC

New from Lambda... Power Kits

Pre-designed power supply circuits and selected components providing four levels of regulation and ripple...over 150 circuits.

1. define parameters

- output voltage
- current
- regulation
- ripple

Everything you need for a pre-designed power supply.

Lambda power kits are comprised of components selected for a pre-designed power supply circuit so that you can build your own dc power supply.

Lambda is its own distributor for these major components:

power transformers
filter chokes
computer grade electrolytic capacitors
silicon rectifiers
regulator systems

The components vary depending upon the circuit selected, as well as the dc voltage and dc current required.

Off-the-shelf delivery for breadboard, pre-production and production models.

Lambda, with the introduction of standard power kits, leaves you free to design your circuit without having to bother with the power supply. Lambda now offers a wide selection of power supply kits to provide you with all the major components from a single source of supply. At the same time Lambda stocks these items so you get off-the-shelf delivery.

2. select power kit

All the major components you need... pre-designed to meet your specific requirements and delivered off-the-shelf from a single source of supply.

Wide selection of circuits for regulation and ripple

Lambda offers a selection of pre-designed groups of circuits from which you can select the regulation and ripple characteristics required for your application. Specifications are available from 0.01% regulation 250 μv rms ripple to 20% regulation at 2 v rms ripple.

Wide selection of output voltages and currents.

In each group of circuits Lambda offers a wide selection of voltages and currents to meet your needs . . . both single and dual outputs. Voltage ranges up to 48 vdc and current ranges up to 50 amperes dc are provided.

Simply select what you need... no calculations or design necessary.

All the circuits supplied with the Power Kits have been pre-designed, proved and tested by Lambda Engineering to assure you the same quality and performance achieved by Lambda's standard line of power supplies. Lambda transformers and chokes carry the same 5 year guarantee as Lambda power supplies. Lambda transformers and chokes are fully varnish-impregnated and built to MIL-T-27C, grade 6, specifications.

Special and multi-output transformers

ulti-output transformers and special output voltage trans-rmers are available on request.

Circuit Specifications

RIES 1000—CAPACITOR-INPUT FILTER POWER SUPPLY CIRCUITS

e regulation: 1.2% per % @ full load
ad regulation: 20% from ½ load to full load
tput voltage tolerance: ±5% @ nominal line of 115 vac
ple: 1 v rms, up to 12 vdc
2 v rms, 15 to 48 vdc
c output voltages: 5 to 48 vdc (ten ranges)
c output currents: 0.25 to 50 amps (seven ranges)
put voltages: 105-132 vac, 57-63 Hz

RIES 2000—CHOKE-INPUT FILTER POWER SUPPLY CIRCUITS

e regulation: 1% per % @ full load
ad regulation: 10% from ½ load to full load
tput voltage tolerance: ±5% @ nominal line of 115 vac
ple: 2% (rms) of dc output voltage
c output voltages: 5 to 48 vdc (ten ranges)
c output currents: 1.0 amp to 50 amps (five ranges)
put voltages: 105-132 vac, 57-63 Hz

RIES 3000—REGULATED POWER SUPPLY CIRCUITS

gulation: 0.15% + 10 mv — line or load
ple: 5 mv rms
c output voltages: 5 to ±18 vdc (four ranges)
c output currents: 0.25 to 50 amps (seven ranges)
put voltages: 105-132 vac, 57-63 Hz

RIES 4000—HIGHLY REGULATED POWER SUPPLY CIRCUITS

gulation: 0.01% + 1 mv — line or load
ple: 250 μv rms, 1 mv p-to-p
c output voltages: 5 to ±18 vdc (four ranges)
c output currents: 0.25 to 50 amps (seven ranges)
put voltages: 105-132 vac, 57-63 Hz

Here's all you do to order Lambda power kits

1. Determine the regulation and ripple requirement for the circuit you wish to supply.
2. Select one of the four series of circuits that best satisfies your needs—1000, 2000, 3000 or 4000 series.
3. Turn to the table for that series and select the power supply kit that meets your dc output voltage and current requirements. No need to design the power supply or to calculate voltage drops across components. This has already been done for you.
4. You may purchase either the entire kit, the transformer, the filter choke, or the capacitors, silicon rectifiers, and regulator.
5. Number System—The Lambda part number is an alpha-numeric designation in three parts:

Stock No. Prefix	Stock No.	Suffix
LPKT	**2311**	**—3**

The stock number prefix defines the kit or components you wish to purchase and the suffix identifies the circuit to be used within that series.

LPKT = Lambda Power Kit
LPTX = Lambda Power Transformer
LPFC = Lambda Filter Choke
LPCR = Capacitors and Rectifiers
LPCO = Capacitors, Rectifiers and Regulators

The stock number defines the circuit series (which identifies the regulation and ripple) in addition to output voltage and current. For stock numbers in the:

1000 series, see pages 4 & 5
2000 series, see pages 6 & 7
3000 series, see pages 8 & 9
4000 series, see pages 10 & 11

Capacitors and silicon rectifiers are only supplied as a unit package in series 1000, 2000 and 3000.

Capacitor, silicon rectifiers, and regulator are only supplied as a unit package in Series 4000.

Example:

If you were to order part number LPKT 2311-3, you would be ordering (from the Power Kit and Component Selection chart on Pages 6 & 7) a complete Lambda Power Kit in the 2000 series, a power supply with a choke input filter, which provides a dual + and — 18 volts dc output at 5 amps each, as shown in series 2000 circuit 3. The kit price on the chart is $138. If, on the other hand you only wanted the transformer, you would order LPTX 2311-3 at $44 or LPFC 2311-3 at $82 if you only wanted the filter chokes, etc.

Ordering:

1. Turn to the page listing the circuit series that meets your requirement for regulation and ripple.
2. Select the voltage you need along the vertical axis of the selection chart.
3. Select the current you need along the horizontal axis of the selection chart.
4. Pick the stock number directly off the chart at the intersection of the axes.
5. You select the stock number prefix to the number depending upon whether you want the entire kit or just individual components. The price for each item is also listed in the same section of the chart. Prices for 1 to 4 units are listed in the left-hand column and prices for 5 or more units are listed in the right-hand column under each current rating.
6. Direct all transformer and other component orders directly to Lambda Electronics Corp., 515 Broad Hollow Road, Melville, L. I., New York 11746.

POWER TRANSFORMERS AND HIGH CURRENT CHOKES

- Available Immediately From Stock
- Secondary Voltages Between The Standard Units Available At No Additional Cost
- Primary Voltage = 115V RMS, 60 HZ (Will Operate To 400 HZ)
- Capacitance and Inductance Values Shown For E_{ripple} (P-P) ≤ 3% of E_{dc}.
- Allow Two Weeks For Non-Standard Voltage Transformers
- Nomenclature of Part Number 1000 - 56 Secondary Power Rating in VA RMS Voltage

STOCKED FOR IMMEDIATE DELIVERY

- Transformer Regulation is 5% No Load to Full Load
1. Transformers Rated For 45°C Temperature Rise. Rated For Class B Performance Per MIL-T-27B.
2. All Transformers Have Two Secondary Windings. They Can Be Connected For Parallel or Series Operation
- Bleeder Current = 10% of I_{dc}.
- V_r of Rectifiers Will Affect D.C. Output Voltage
- Choke Connections: P - Parallel * S - Series

STANDARD MINIATURE 400 Hz POWER TRANSFORMERS

LET MAGNETICO'S EXPERT ENGINEERING STAFF TACKLE YOUR SPECIAL REQUIREMENTS FOR:

- PRODUCTION TOROIDAL WINDING
- HI Q INDUCTORS
- INVERTER TRANSFORMERS
- DC - DC CONVERTER TRANSFORMERS
- DIGITALLY TAPPED TRANSFORMERS
- PRECISION RATIO TRANSFORMERS
- MAGNETIC AMPLIFIERS
- PRECISION REFERENCE TRANSFORMERS
- PULSE TRANSFORMERS
- WIDE BAND TRANSFORMERS

MCE MINIATURE TRANSFORMERS

400 CYCLE • 60 CYCLE • MULTI-PURPOSE

Forwards they're for isolation and stepdown — backwards they're for converters and inverters. This built-in bi-directional capability is only one of the many values designed into MCE's miniature standard transformer line. These unique parts are listed below in our easy to find "by size" sequence. As is the case with all MCE standard lines, any component can be ordered in a variety of packaging, mounting, and termination configurations.

In addition to a wide selection of electrical specifications and packaging options, MCE standard components offer high value (quality/price). Request Catalogue for more information.

115V - 400 CYCLE RT SERIES

This RT line of miniature transformers has been designed for use in 400 cycle power supply and control applications. They are also useful for inverter and converter applications in the popular 400 cycle to 2Kc frequency range. Each part has a nominal 115 Volt RMS center-tapped primary and two equal and separate step-down secondaries. Total power ratings are from 2.4 to 215 VA. This is based upon a regulation of 10% or a temperature rise of 25°C above ambient of 25°C. Power ratings and secondary voltage ratings are for both secondaries carrying rated current. The secondary voltages given in the tables are for each separate secondary. The two secondaries may be connected in series to give twice the rated voltage (V) at rated current with a center tap available.

MINIATURE LINE

DIMENSIONS AND PACKAGING

MCE miniature standard parts are available in the 7 packages listed below. The 2 letter alpha code of the desired package must be added as a prefix to the Electrical Part Number to completely identify the part.

CA (Canned) Studs with terminals on same surface
CB (Canned) Inserts with terminals on same surface
CC (Canned) Studs with terminals on opposite surface
CD (Canned) Inserts with terminals on opposite surface

OA (Open) Terminals, strap bracket and hard epoxy coating
OB (Open) Flex leads, strap bracket, moisture resistant coating.

EA (Encapsulated) Terminals with thru holes at corners.

LOW PROFILE HERMETIC SEALED CAN (CA EXAMPLE)

ENCAPSULATED WITH THRU-HOLE MOUNTING (EA EXAMPLE)

OPEN FRAME WITH EPOXY COATING (OA EXAMPLE)

115V - 60 CYCLE CT SERIES

These miniature 60 cycle transformers are especially designed for small DC power supply and other control applications, where a voltage step down and/or isolation from the standard 115 volts is required at relatively low power levels. All secondary windings have center taps and are Bi-Filar wound for balanced resistance and voltage. Rated secondary current (I) is based upon regulation of 15%. Maximum secondary current (I Max.) is determined by a temperature rise of 100°C from an ambient of 25°C or the short circuit current indicated by (*). Secondary load voltage (V) is at rated current (I).

115V 400 CYCLE/20KC MULTI-PURPOSE TRANSFORMERS - MT1 SERIES

This line of utility transformers offers the design engineer a valuable tool for proving design concepts at minimum cost. Because they are lightweight and built to Mil-Spec they can be used equally as well as final design components. Primaries and secondaries both have two 57½ Volt windings. Built for a basic 400CPS operation, they will operate effectively—and with small phase shift-up to 20KC. Specifications are at 25°C at rated voltage, 400 cycle. For suggested circuit applications, write for product bulletin MT-1.

MCE MINIATURE FILTER INDUCTORS

mce

APPLICATION FEATURES

Miniature inductors, primarily for use in DC power-supply smoothing-filter applications, are offered in two series (1) the linear FL SERIES and (2) the "swinging" NL SERIES.

The FL SERIES inductors are especially suited for requirements where the DC will be 50 to 100% of I-DC rated. They will provide the most inductance in this range.

The NL SERIES inductors are generally more suitable where the DC will vary between 10 to 100% of I-DC rated. The inductance at rated I-DC is approximately ¼ of the value at I-DC = 0.

Both SERIES are listed by size in the tables of specifications. The V, I-DC, and R are the same for similar part numbers, only the inductance values and characteristics are different.

All parts are available in any of the MCE Miniature Line package options (OA, OB, EA, CA, etc.).

NOTES:

1. *The inductance values given are at the corresponding V-RMS 60 CPS voltages and I-DC = 0. For test purposes, it is recommended that inductance measurements be made by impedance, or E-I method. This is preferable to bridge type instruments because of the relatively high AC voltage levels and low Q values at 60 CPS.*
2. *For canned parts (CA, etc.) with very small resistance values ($R \leq 1.0$), the total resistance at the terminals is slightly higher than the table values. If required, request this data giving complete part number.*
3. *Dielectric withstanding voltage: 500 V-RMS 60 CPS.*
4. *Insulation resistance ≧1000 megohms @ 500 V-DC.*
5. *All electrical data is @ 25 ±5°C.*
6. *For complete packaging information refer to appropriate Package Bulletins (OA, OB, EA, & CA).*
7. *Sizes 25 and 37 encapsulated parts (EA) have only 2 thru holes.*
8. *All OB type parts with part numbers ending with 15, 16, or 17 have self leads (solid) with sleeving.*
9. *Specify complete part number, e.g. OA25FL20, OB37NL18, EA50FL17.*

TERMINAL/LEAD LOCATION

DEL MONTE RESEARCH PARK
2455A GARDEN ROAD, MONTEREY, CALIFORNIA 93940
TELEPHONE (408) 373-0456

NEW MINIATURE TYPE MCV-1

118 or 5 V output ±1% at 0.6 VA with 95-130 V, 60 cycle input. Only 2 7/16" by 1 25/64" dia including built-in capacitor. $12.75 net. (Also made in any voltage & current combination to max of 0.6 VA @ 60 cy., 5 VA @ 400 cy.)

NTC CONSTANT VOLTAGE TRANSFORMERS

STATIC-MAGNETIC VOLTAGE REGULATING TRANSFORMERS

NORMAL HARMONIC TYPES

- Output capacity from 0.5 to 3,000 VA
- Instantaneous, continuous voltage regulation
- No tubes or manual adjustments
- Ratings made to order at low cost
- Compact, single-unit design
- Low-cost open types for component applications
- Heavy-duty, enclosed types for accessory uses
- Single or multiple secondaries

NTC constant voltage transformers maintain output voltages within one percent with input voltage fluctuations up to 15 percent. Regulation is instantaneous, continuous and completely automatic. Operating on principles of ferro-resonance, the transformers have no tubes, moving parts or separate saturable reactors.

Most important, the design of NTC constant voltage transformers enables their outputs to be made exactly to your specifications — and at decidedly low cost even in small quantities. With only a few basic lamination configurations and windings, virtually any output voltage/current combination can be obtained. *Since the transformers are designed to your specific requirements they often eliminate costly circuitry and expensive components.*

POWER SUPPLIES, too . . . Neshaminy's engineering skills are at your service for the design and quantity production of complete, regulated power supplies in any capacity and rating. Let us discuss your next requirement.

TYPICAL STANDARD MODELS

1% output regulation. Closer regulation to order. Output contains approx 14% total rms harmonic content. SPECIAL MODELS can be made quickly to exact requirements in any step-up or step-down ratio of voltage to current within the desired VA rating and with single or multiple secondaries, with or without centertaps. CV models also available for 50 cycles, and MCV models for 50 or 400 cycles.

NOTES

1. Cord/Receptacle kits, similar to that shown in illustration are available on all "C" style transformers of 118 VAC output rating.
2. Specify required input voltage range on CV transformers from 250 to 1000 VA.
3. To specify output voltage required (6.3 or 118 VAC) add voltage to model number (Example — 15 VA cased transformer with 118 VAC output would be model #CV15-118).
4. "C" style units have built-in capacitors. Styles "E" and "O" have external capacitors.

Send us your requirements for a prompt quotation.

NESHAMINY TRANSFORMER COMPANY

Furlong, Penna. (215) 794-7411

NTC is a division of the Neshaminy Electronic Corporation, manufacturers of JansZen Electrostatic high fidelity speaker systems and components. NTC input and power transformers are used in the high voltage bias supply of the JansZen Electrostatic.

▲Full wave and C.T. loads may be simultaneously drawn, but for continuous duty, total V.A. output should not be exceeded. ■For positive and negative voltage supply as utilized in op-amp and similar circuitry, use secondary circuit #10. *Output when used with schematic indicated. **Based on approximately 1 volt drop per rectifier. †Frequency depends on load and bias conditions. ▲M8050, M8051, M8073, M8074 are blocking oscillator types.

400 Hz POWER SUPPLY TRANSFORMERS

(FIG. P)

For silicon rectifier circuitry and filament applicationns. Hermetically sealed. Primary, 105/115/125 V. Output voltage given for resistive or inductive loads, based on approx. 1 V drop per rectifier. MIL Type TF4RX01— (add MIL Case Type from table) per MIL-T-27.

400 Hz TOROIDAL POWER TRANSFORMERS

Ideal for applications requiring minimum size and weight. Feature epoxy molded case and printed circuit pins which can be bent for chassis mounting. Toroidal cores provide greater efficiency and low phase shift. All have 115 V primary windings and center .170" clearance hole for #8 screw. MIL Type TF5SX01ZZ. FIG. W

MINIATURE TRANSFORMERS — M & MT SERIES

M-M (Fig. O): Molded, for plug-in printed circuit use. Cast epoxy resin provides highest resistance to temperature extremes. MIL Type TF5RX—ZZ (Insert MIL No. from table). Max. Size, 1 3/32" x 7/8" x 7/8". Wt., 1 3/4 oz. **M-AG (Fig. Q):** Enclosed in modified MIL-T-27B AG case with compression sealed ceramic terminals. MIL Type TF4RX—YY. Max. Size, 1" x 1" x 1 3/8". Wt., 2 3/8 oz. **M-H (Fig. R):** Hermetically sealed with high compression glass terminals, gray enamel finish. Available on special order with .120" holes. MIL Type TF4RX—YY. Size, 15/16" dia. x 1 7/16" max. Wt., 1 1/4 oz. **M-A (Fig. S):** Aluminum case with 2-56 screws. MIL Type TF3RX—YY. Size, .875" dia. x 1 3/16". Wt., 1.25 oz. **M-FB (Fig. L):** Open frame with channel. Available with plug-in tab channel or without channel on special order. MIL Type TF6RX—ZZ. Size, 1 3/64" x 13/16" x 27/32" max., plus tabs. Wt., 1.13 oz. **M-P (Fig. T):** Octal plug-in type in sealed plastic housing. MIL Type TF6RX—ZZ. Size, 1 3/32" dia. x 1 15/32". Wt., 2 oz. **M90 Shield (Fig. E):** 25 db magnetic shield for Type M-A. Two clearance holes on 1 1/16" centers. **M-PC (Fig. U):** Open frame PC with terminals molded into bobbin to maintain accurate dimensions for PC board. MIL Type TF6RX—ZZ. Size, 7/8" x 1 1/32" x 1"; terminals 3/16" below bobbin. Wt., 1.2 oz. **M-CM (Fig. M):** Contour molded on special order only; for mtg. on top of chassis. Size, 1 5/32" x 7/8" x 7/8". Prices on request.

ULTRA-MINIATURE TOROIDAL INDUCTORS — QE-M SERIES

Affords new application opportunities in high density packaging. Ultra miniaturized with low height design. Exceptionally high "Q" and wide frequency range. Available on special order with ±1% inductance tolerance. Frequency range of QEL Series 1 to 300 kHz; QEM, 3 to 500 kHz. Accuracy, ±2%. Molded in epoxy resin with .020" x 2" gold-plated nickel alloy leads. Size, .450" dia. x .285".

MICRO-MINIATURE TOROIDAL INDUCTORS — QG SERIES

Frequency range of QGL Series, to 20 kHz; QGM Series, 2 to 100 kHz. Accuracy, ±2%. **QG-F:** Open frame, microcrystalline wax dipped with 4" #28 plastic leads. Size, 5/8" dia. x 9/32". **QG-M:** Molded in high temperature epoxy resin with .020" x 2" gold plated nickel alloy leads. Leads may be bent downward for plug-in printed circuit use. Size, 7/8" dia. x 3/8". **QGH:** Hermetically sealed. Size, 11/16" dia. x 13/32". **QG-HC:** Hermetic crystal can. Special order only; prices setup charge same as QG-H Series. Size, 23/32" x 11/32" x 45/64".

IMMEDIATE DELIVERY FROM STOCKING DISTRIBUTORS • SEE RADIO MASTERS FOR COMPLETE PRICE SCHEDULE

for pulse transformers[1] read the fine print.

Ness Pacific[2] is the first international electronics firm specializing in high-volume, off-shore[3] manufacturing of industrial and commercial magnetic components[4], particularly pulse transformers[5]. Our design engineering, prototype manufacturing, administrative and sales offices[6] are headquartered in Palo Alto[7] and our manufacturing facilities are located in Hong Kong[8] and Djakarta.[9] Typical products manufactured are dual in-line packaged floating switches and baluns[10] (four transformers per module). And Ness Pacific pulse transformers[11] quality is equal or better than our competition's[12] because the highest quality materials and most modern[13] production techniques are employed. To get complete information, write, call, cable, and/or TWX Jim Rogers[14] at 470 San Antonio Road, Palo Alto[7] 94306, [415] 328-7036, cable NESSIND, TWX 910 373-1177. He'll do the rest.[15]

Even Finer Print

1. Also semiconductor assembly, coil-winding, memory plane stringing, etc.
2. One of the Ness Industries family of companies
3. Don't let this scare you, nearly all pulse transformers are made outside of the U.S.
4. (See 5)
5. More particularly, those high volume, custom products that you computer people buy by the billions
6. By the time you read this, we'll have reps in your area too
7. California
8. British Crown Colony
9. Indonesia
10. Send for our data sheets to get the complete poop
11. Sometimes referred to as "NPPT's" or "NESSPUTS"
12. Sorry, no names named
13. Like in "state-of-the-art"
14. A sterling fellow; you'll like him
15. Like call on you, shower you with personal service, product information, quotes, samples (but only if you're really serious), and on-time deliveries

SPECIALISTS IN SPECIAL TRANSFORMERS

POWER & ELECTRONIC

Your one source for all types...designed and manufactured to your specifications or actual requirements

NWL designs and manufactures transformers:

FURNACE
FILAMENT
HEATING
LIGHTING
SCR CONTROLS
PLATE
HIGH FREQUENCY
INSTRUMENT
PHASE CHANGING
WELDING
HIGH VOLTAGE
TESTING
HIGH REACTANCE
OUTPUT
also
SATURABLE CORE REACTORS
CHOKES
AC REACTORS
PACKAGED CONTROLS
AIR CORE REACTORS

Instrument transformers, current and potential, 1-10,000 amperes, 1-50,000 volts. High accuracy, through type, bus bar, indoor and outdoor.

Plate, audio and modulation transformers in sizes from 50 VA to 100 KVA and up to 100,000 volts.

Chokes, linear and swinging. 0.1 millihenry to 10 henry.

Filament transformers, single and multiple. Up to 100,000 volts, dry and oil types.

Saturable Core Reactors, from 50 VA to 500 KVA. Single and 3 phase.

Rectifying transformers and supplies, 1, 2 or 3 phase. 1 to 3,000 amperes, up to 500 KVA.

Oil filled specialty and high voltage transformers up to 300 KVA.

Heating transformers for resistance and induction furnaces. All types. Up to 1200 KVA.

High impedance type transformers, from 50 VA to 50 KVA and up to 10,000 volts.

High power and high current water-cooled transformers.

Reactors, 50 VA to 500 KVA. AC and DC. Linear and swinging.

Solid State SCR Power Controllers.

OHMITE has the answer in variable transformers

Seven basic physical types meet most industrial requirements with long, maintenance-free life. Excellent regulation at any point within rated load; free from wave-form distortion. Direct-reading 2-scale (1 per side) dial supplied; CCW also available. New space-saving low power types VT1, VT02 and VT3 have adjustable shaft independent of brush assembly, 3-way terminals, instantly replaceable brush contacts and improved heat dissipation. **Mounting:** Easily replace other brands: VT2LN, VT1, VT02 and VT3 have 3/8-32 thd. bushing; VT8 and VT20, 4-hole bolt mount; VT4, 3-hole bolt mount convertible to 4-hole with adapter plate. **Enclosed Types:** Gray hammertone-finish cases. Units with suffix **B** have exposed terminal panel and mounting base; **E**, fixed type for table or panel mounting; **F**, portable with cord, outlet socket and fuse; **G**, deluxe portable with handle, circuit breaker and switch for overvoltage selection. Final suffix: **V** indicates with voltmeter; **VA**, voltammeter; **VW**, volt/wattmeter; all come with handle except VT8NF series. **Other Options:** All types except VT2LN offer shafts, extendable from brush or base side; ganged versions have thru-shaft with same flexibility. Final suffix **C** types come with 3-cond. input and output with one grounded to case. **UL Listing:** Most single and tandem VT4, VT8 and VT20 units for 120 volt operation are U/L Listed. Consult factory.

*Minimum; max. up to 1000 cps for all models. †Use also at 50 cps if connected at no overvoltage output. ‡With 120V input tap at which the max. current output rating applies up to 120 volts, but reduces approx. 50% at max. output voltage shown. In tandem units, the use of low voltage inputs would halve the rated input and output voltages. §User wires for desired output; dial normally calibrated for overvoltage. #Factory-connected for overvoltage output; easily re-connected by user for no overvoltage. •Switch selects overvoltage or no overvoltage. ¶5¾" including handle. ■Case height only, excluding handle. ♦Depth behind panel: add 1" for knob thickness for VT8 types; ⅞", VT02 or VT4 types; 1¼" for VT20 types. θ9" including handle. ††Includes knob, dial and hardware. **Must not be connected for overvoltage. ‡ For mounting bracket, add 1¼" w. x 7/16" d.

MULTIPLE, IN-TANDEM TRANSFORMER ASSEMBLIES

Ohmite Number	Input Volts	Max. Output Amps	Max. Output Volts	Feature or Connection	Size, Inches W. x D.♦ x H.	Net Each 1-4
SINGLE-PHASE, TWO-IN-TANDEM						

Normally wired for series connection; when so connected, load cannot be grounded. Standard CW dial 240/280 volts except VT02 tandems where 240/264 V dial is supplied; on VT8H-2, 480/560 volt dial is standard. Other dials available as listed elsewhere on these pages.

SOLA ELECTRIC

DIVISION OF SOLA BASIC INDUSTRIES

CV Transformers

Constant-voltage Sola transformers provide a stabilized output voltage even though the input voltage varies over a considerable range. Their applications are numerous and varied. CV's are especially ideal for high-accuracy requirements such as in computers and data-processing equipment.

Another advantage in CV transformers is their ability to prolong the life of electronic components by eliminating injurious over- and under-voltages. The Sola transformer's current-limiting factor protects semiconductors and other components from excessive inrush and fault currents.

Write for catalog CV-100 for complete listings including 50 and 400 Hz models.

*Same as W, but duplex. **Same as W, but triplex.

AUTOMATIC, INSTANTANEOUS VOLTAGE REGULATION FOR A WIDE VARIETY OF ELECTRIC AND ELECTRONIC DEVICES

D — Drawn case; integral capacitor unit; flex leads.

S — Hermetically-sealed case; separate capacitor; solder lugs.

E—Exposed core; end bells; separate capacitor; flex leads.

W—Exposed core; end housings; screw-type terminals in outlet box.

Normal Harmonic Type (CVN)

Electronic-Power Types ±1% REGULATION FOR FILAMENT TYPE, ±3% FOR PLATE-FILAMENT TYPE

The electronic-power type of Sola transformer is designed as a component for simple assembly into many kinds of electronic equipment. The filament type (CVF) provides 6.0 or 6.3 volts of output regulated within ± 1% over line variations of ± 15%; the combination plate-and-filament type (CVE) regulates within ± 3%.

D — Drawn case; integral capacitor unit; flex leads.

E — Exposed core; end bells; separate capacitor; flex leads.

for filament service (Type CVF)

*Voltage values are taken at output of 5Y3GT rectifier for No. 7104 and No. 7106 transformers and at output of 5U4GA-GB for No. 7107. Guaranteed regulation of ±3% on plate voltage output is contingent on the use of Sola-regulated 5.0μ filament supply winding for the rectifier tube.

For more information on SOLA CVDC Power Supplies, see page 1211, Section 4000.

PARALLEL CONNECTED SECONDARIES

All transformers are designed conservatively for a max of 45°C rise above ambient, for use on 115V power line from 50-500 cps. Only prime raw materials are used. Units are thoroughly impregnated and baked with Signal's own high gloss black baking varnish. The transformers and chokes are rugged in construction, well-insulated, and have a consistently uniform appearance. All ratings are at full load current continuous operation.

Electrical ratings have been chosen to cover a wide range of applications. All transformers have two center-tapped secondary windings.

FACTORY: 1 JUNIUS STREET, BROOKLYN, NEW YORK 11212 — (212) 498-5111

HIGH & LOW CURRENT CHOKES 0.1 to 1000 AMPS

OPEN FRAME • EPOXY ENCAPSULATED (GRADE 5) • HERMETICALLY SEALED (GRADE 4)

Signal's line of High and Low Current Chokes is the most extensive available. It is designed to complement the selection of High and Low Current Transformers so that a set may be specified for power supplies using inductive filters.

The inductance ratings given are minimum values guaranteed at full DC current. All resistance ratings are maximum values.

Special variations or intermediate values of inductance, current, or resistance can be supplied promptly and accurately.

FOR MECHANICAL DIMENSIONS REFER TO TRANSFORMER OUTLINES ON PREVIOUS PAGE

Signal's Dual Chokes are supplied with 2 windings which may be series or parallel connected with rating shown on chart. This line is basically designed for applications requiring lower inductance values at high currents, such as low voltage, DC supplies or SCR filters.

MULTI-VOLT 1 to 54 VOLTS in 1 VOLT STEPS

"MV" LINE

MV (multi-voltage) secondaries may be series connected for any output from 1 to 54 volts, in 1 volt steps, at rated current. This is accomplished by using the small buck-boost secondary.

Part No.	Secondary Amps.	DIMENSIONS L	DIMENSIONS W	DIMENSIONS H	DIMENSIONS ML	DIMENSIONS MW	Appr. Wt.

As shown on the schematic diagram dual primaries are provided. This permits parallel connection for 104, 110, or 120 volts or series connection for 208, 214, 220, 230, and 240 volts. Frequency range is 50 to 500 cps.

It is important to note that primary taps may be used to adjust the secondary voltages. Line voltages up to 125V (parallel) or 250V (series) may be used on the lowest primary tap. Nickel plated screw terminals are provided on a heavy phenolic board for easy primary connections.

WINDINGS OF HEAVY COPPER STRIP

STRIP-WOUND SECONDARIES

At the heavy current used in this line it becomes practical and desirable to use wide copper strip (as wide as the coil itself) for windings. Besides the obvious advantages of excellent winding space factor, the heat dissipation of the coil is improved. This improvement is due to the fact that the heat generated in the windings has a pure copper path to the coil ends, where it can be dissipated. In conventional windings of many turns per layer this heat flow is impeded by wire insulation and air spaces between turns. Therefore, the use of copper strip windings yields a dramatic reduction in size and weight.

GRAIN-ORIENTED STEEL CORE

These cores permit the use of higher peak flux densities for the same core loss. This results in a lower number of turns required and therefore, a smaller, more compact transformer.

CLASS F INSULATION USED THROUGHOUT

Class F insulation is rated for unlimited life at a total temperature of 155°C (ambient plus temperature rise).

Class A insulation has a maximum temperature rating of 105°C. The "nominal" current ratings given to this series are for a temperature rise of 45°C above 55°C ambient (Class A). Since Class F insulation is used it is permissible to increase these ratings by 40% (700 and 1400 amperes) without reducing the reliability of the transformer. The temperature rise will be 100°C over a 55°C ambient. The only limitation is not the transformer, but the temperature rating of surrounding components which may be affected by the additional heat radiated by the transformer.

At higher power loads (above 2-3 KVA) it becomes inefficient to use single phase 115 or 230 volt standard lines. With this in mind, our engineering staff has developed a line of 3 phase transformers for use off 208 or 220V 3 phase power lines. These offer the significantly higher conversion efficiency and lighter power line drain of 3 phase systems. Since the principal application of these items is in high power dc power supplies, output ratings are given in dc voltage and current assuming the use of a 3 phase full wave rectifier.

INDUSTRIAL GRADE
STEP-UP OR STEP-DOWN
POWER ISOLATION OR AUTO-TRANSFORMERS
HIGH DEGREE OF VERSATILITY OFFERS MANY POSSIBLE VOLTAGE RATINGS

AVAILABLE FROM STOCK FOR IMMEDIATE SHIPMENT

The "DU", "SU", and "UP" lines are designed for a maximum of 55°C rise above ambient for use on standard power lines from 50 to 500 Cps. Only prime raw materials are used. Units are thoroughly impregnated and baked with Signal's own high gloss black baking varnish. The transformers are rugged in construction, well-insulated and have a consistently uniform appearance. All ratings are at full load current, continuous operation.

Heavy ¼ inch phenolic terminal boards are provided with plated brass screws and flat washers. Connections can be easily made with a nut driver. It is also simple to alter the inter-connections to change transformer ratings. **Electro static shields are provided grounded to the core.** The connection is made with a lug to ground and may be opened if an ungrounded shield is desired.

"DU SERIES" 110/220 Dual Primary To 110/220 Dual Sec. (Primary & Secondary may be reversed)

As shown on the schematic diagram the "DU" line is designed with dual primaries and secondaries. All four windings are identically rated at 0/104/110/120 volts. This permits series or parallel connections on either primary or secondary. Therefore, a nominal 110 to 110 volt, 220 to 220 volt, 110 to 220 volt, or 220 to 110 volt transformer can be set up. The winding taps permit intermediate series ratings such as 208, 214, or 230 volts.

It is also possible to make auto-transformer connections by connecting a primary group in series with a secondary group. Such nominal ratings as 440 to 220 volts or 220 to 440 volts can be set-up, in addition to the standard ratings described above. A further advantage to auto-transformer connection is the fact that the KVA rating of a particular type is **doubled.**

Part No.	KVA	Series Secondaries		Parallel Secondaries		Mechanical Dimensions					Mtg. Screw	Appr. Lbs.

"UP SERIES" 110/220 Dual Primary To 0/130/135/140 V. Sec. (Primary & Secondary may be reversed)

The "UP" line utilizes the same dual primary as the "DU" line. It has, however, a single secondary rated at 0/130/135/140 volts.

This type is quite useful to boost low line voltages or raise line voltages to compensate for drops in series elements. It also finds application in bridge rectifiers for DC voltage outputs of approximately 115 to 130 volts.

Part No.	KVA	Secondary Volts	Max. Secondary Amps	L (Max.)	W (Max.)	H (Max.)	ML ± 1/32	MW ± 1/16	Mtg. Screw	Appr. Lbs.

CONSTANT VOLTAGE TRANSFORMERS

FOR USE IN DC POWER SUPPLIES (TYPE CDC)

SCHEMATIC DIAGRAM *

CDC CONSTANT VOLTAGE TRANSFORMERS

Signal's CDC Regulating Transformers are specifically manufactured for use in DC Power Supplies. They are designed and rated for use with a full wave center-tapped silicon rectifier. CDC transformers are operated in ferro-resonance and are used in conjunction with an AC **tuning capacitor** (Cr in schematic diagram), which is supplied with the transformer.

In order to construct a regulated power supply the only other parts necessary are two diodes (D_1 and D_2), an electrolytic computer grade capacitor (C_f) and a bleeder resistor (R_b). These are standard shelf items.

The specification chart lists specific outputs available and the recommended auxiliary components. Part numbers are coded in terms of DC outputs, e.g., CDC-15-2 will give an output of 15V DC at 2 amps DC.

Electrical performance is completely specified. The DC voltage is constant to ±1% over the line voltage range of 100 to 130V at 60 HZ. The nominal output is held to ±2%. Closer tolerance on nominal output (±1%) can be obtained on special order at slightly higher cost.

Load regulation is specified as the rise in dc voltage output (increase in E_{dc}) from full load to the no load, ¼ load, and ½ load points. The filter capacitor (C_f) specified should be used and will yield the values of ripple voltage shown.

A significant protection feature is the fact that the DC short circuit current is limited to a maximum of 2 times rated current (3 times in size "C-6" units). This protects the entire circuit against shorts.

* See mechanical dimensions on opposite page.
‡ Bleeder resistor may be eliminated if load current does not fall to zero. DC amp rating may be increased accordingly.
† May be reduced if ripple requirements are less severe.

CONSTANT VOLTAGE TRANSFORMERS

FOR USE IN AC APPLICATIONS (TYPE ACV)

Signal ACV transformers are manufactured for use with AC loads. They are simple and rugged designs and will regulate to within plus or minus 1% for input variations from 95-130V at 60 cps. If regulation of plus or minus ½% or better is desired, special units can be made to your order. ACV transformers will regulate with loads that are not unity power factor.

Full regulation is maintained at any load from about 20% to 100%. Overload current is limited to a maximum of 200% of rated current at short circuit. The 6.4 and 12.8V ratings are ideal for use with tube or lamp loads since the short circuit current rating limits the inrush current to cold filaments. Stabilization of the voltage results in longer filament life.

ACV transformers are "normal" harmonic type with approximately a square wave output.

PART NO.	VOLTS AC	AMPS AC	STYLE & SIZE
25 ACV-6.4	6.4	4	B-25

B-500	5	5¾	5 1/16	4⅜	3 15/16	#10

ADVANTAGES OF CONSTANT VOLTAGE TRANSFORMERS

REGULATION — output regulated to plus or minus 1% for line voltage variations of 95 to 130V at 60 cps.

SELF-PROTECTION — against output short circuit. Current limited to a maximum of 2 times rated current.

MECHANICALLY RUGGED — as resistant to mechanical shock as conventional power transformers.

NO MOVING PARTS — no adjustment or maintenance necessary.

SQUARE WAVE OUTPUT — ideal for use in rectifier circuits — little filtering needed.

HIGH DEGREE OF ISOLATION — between input and output circuits — both physical and electrical isolation, electro-static shields not necessary.

RESONATING CAPACITOR — supplied with transformers.

EPOXY IMPREGNATION — minimizes acoustic noise.

Signal's PC Transformers are constructed of prime raw materials using Class S insulation and nylon bobbins with PC pins molded directly in the bobbin wall. They are vacuum varnish impregnated and 100% tested for all parameters before shipment.

Primaries are rated at 115 V. 50 to 500 Hz. Dual secondaries provide two outputs, or secondaries may be series or parallel connected. This results in a wide variety of output combinations. Load regulation is limited to a maximum of 20%.

FOR INDICATOR TUBE & I.C. APPLICATIONS

"PCN" transformers provide ideal outputs for use in indicator tube and I.C. applications. 175 or 130 V. can be used for DC supplies for "Nixies" and 6.3 or 12.6 V. can supply power for associated I.C. circuitry or supplies.

DUAL INDUCTORS FOR SMOOTHING & SCR SURGE LIMITING

"PCC" dual filter chokes find use in DC supply filters or as inductive elements in switching circuits. Another application is to limit current surge (di/dt) in SCR circuits. These chokes may also be used as AC reactors.

Note Pins 3 & 5 are Dummy Terminals

SPECIAL "PC" COMPONENTS

Signal maintains a unique department which specializes in the design and production of "PC" type transformers and chokes.

It is equipped with the most modern automated coil winding and lamination stacking machinery. Specialized production test equipment assures uniform, high quality transformers at the most economical price. This facility is being constantly improved and expanded to meet the growing demand for our designs.

The "PC" items shown here are stocked in depth at our factory for immediate delivery. However, they represent only a small fraction of our total shipments. The major portion consists of custom designs or variations for our customer's special requirements.

Please contact us for prompt quotations on any of your special requirements for "PC" or other bobbin wound components.

120 VOLT SINGLE PHASE PANEL MOUNTING

Cased and uncased units designed for mounting on panels 1/4" thick to 5/8" thick. Most panel mounting units can also be bench mounted.

Mfr's Type No.	Volts	Output Amps	KVA	Size	Weight (Lbs.)	Price

*60 cycle operation only at overvoltage.
**60 cycle operation only.

120 VOLT SINGLE PHASE MODELS WITH CORD & RECEPTACLE

All models housed in rugged cases include pilot light, switch fuse, line cord, plug and matching receptacle.
2 PF models are equipped with 2-wire cords, plugs and receptacles.
3PN models are equipped with 3-wire grounded cords, plugs, and receptacles.

120 VOLT VARIABLE ISOLATION TRANSFORMERS

STACO isolated variable autotransformers provide a means for smooth control of an electrically isolated AC voltage output. Uncased models offer isolated, non-isolated voltage doubler, and series connections with proper external hook-up. Cased models feature circuit breaker, switch pilot light, output voltmeter 3-wire grounded cord, plug, and matching receptacles. Cased models available in isolated connection only. Ratings shown are for isolated connections.

Mfr's Type No.	Volts	Output Amps	KVA	Size	Weight (Lbs.)	Price

EJ401V	0-140	4.0	.56	$9\frac{1}{2} \times 12\frac{15}{16} \times 6\frac{3}{8}$	26.0	89.00
EJ901V	0-140	9.0	1.26	$11\frac{1}{4} \times 14\frac{9}{16} \times 6\frac{5}{8}$	36.0	105.00

EJ201V, EJ401V, EJ901V have a 0-140 VAC and 0-120 VDC at full rated current available at isolated banana receptacles.

DELUXE VARIABLE AUTOTRANSFORMERS

STACO offers a selected group of variable autotransformers with new style, broad applications, and a unique combination of practical features. Suitable for use in any industrial application, classroom or laboratory. All units provide continuous voltage control over a wide range, and all are protected against short circuit. Convenient controls provide error-free operation and distortionless adjustment of AC voltage.

E501V, E501VA, E501VAW, E1010V, E1010VA, E1010VAW have isolated AC and DC outputs of 10% of the output current rating of the unit. Outputs are available at isolated banana receptacles.

V = Voltmeter A = Ammeter W = Wattmeter

STACO Variable Autotransformers are precision built to exacting tolerances from the finest materials available.

Staco's new improved design provides long life with negligible maintenance, high efficiency and regulation, greater power to size ratio. Staco designs permit replacement of competitive equipment or previous Staco models without modification.

Models are available in various configurations from 1.75 to 300 amperes output. Choose from panel mounted units, cord and plug types or deluxe fully enclosed portable models, with or without metering. Staco products represent 25 years experience in providing safe and dependable control of power.

Contact your local representative for full details or write the factory for our new Product Guide.

STACO® INCORPORATED

POWERSTAT® *Variable Transformers now*

New epoxy-coated POWERKOTE Coils make the POWERSTAT line the most outstanding value in variable transformers today. *Without increase in price, size or weight,* only POWERSTAT Variable Transformers give an average of 20% higher current ratings, 10:1 greater overload capability, longer life, greater resistance to fungus, salt spray and other contaminating atmospheres. POWERKOTE Coil commutator bars are embedded in place preventing steady-state operating temperature and severe overloads from distorting the commutator.

POWERSTAT Variable Transformers are designed to deliver continuously adjustable voltage from a-c power lines. They introduce no waveform distortion and feature rugged construction, precious metal plated commutators, excellent regulation, high efficiency and conservative ratings. All manually operated types listed in the charts except the 10B-12, EN116B-EN216B and EN117B-EN217B Series are available with motor drives if desired. Motor-driven speeds are 5, 15, 30 or 60 seconds for full range travel on all except types having -4, -5, or -6 suffixes which do not offer the 5-second speed. Single types in the 116B-216B, 117B-217B, 126-226 and 136B-236B Series are also offered with 2- or 3-wire cord-plug sets. 1156D-1256D Series types are available in ratings to 244 kva.

ADJUSTABLE SPEED DRIVES

All motor-driven units in the 116B-216B, 117B-217B, 126-226, 136B-236B and 146-246 Series are available with adjustable speed drives which permit the output voltage of the transformer to be controlled over the full range of zero to maximum output voltage at speeds ranging from 5 seconds to 200 seconds. All control circuitry is solid-state and adaptable for present speed systems. The Adjustable Speed Control Potentiometer BHP65455-G1 can be remotely located from the variable transformer.

VOLTBOX® A-C POWER SUPPLY

Contains POWERSTAT Variable Transformer, voltmeter, three output receptacles, two 5-WAY Binding Posts, "on-off" switch, line-load meter switch, fuse and six-foot cord-plug. Type UC1MB ratings are 120 volt, single phase 50 60 hertz input and 0-140 volt 10 ampere, 1.4 kva output.

IN SECTIONS 2100, 3500 AND 4000

STATIONARY METERED KNOB POWERSTAT® Variable Transformers

TYPE VS116B

TYPE VS3PN126

TYPE VS146T

GENERAL UTILITY MOUNTING – Single units (those listed in charts without -2 or -3 suffixes) in the 116B-216B, 117B-217B, 126-226, 136B-236B and 146-246 series are also available with knobs incorporating direct-reading voltmeters. Voltmeters remain stationary as the knob rim is turned, have an accuracy of ±3% of full scale and are insensitive to stray magnetic fields. When ordering, add VS prefix to the type number given in the charts.

BACK-OF-PANEL MOUNTING – Standard cataloged POWERSTAT Variable Transformers in the 21-22 through the 146-246 series designed or adaptable for back-of-panel mounting can be combined with Metered Knob Assemblies. Models for 120 volt service require Metered Knob Assembly VS150 having a 0-150 volt scale and units for 240 volt use require Metered Knob Assembly VS300 having a 0-300 volt scale. Existing models can be retrofitted also.

ENCLOSED LABORATORY POWERSTAT® Variable Transformers

TYPE N10B

TYPE N21

TYPE N116B

TYPE N116BK

Portable, single phase units having grounded NEMA cord-plug assembly, on-off switch, output receptacle, pilot light and fuse. The handle is integrally designed and the panel controls are recessed. A slot is provided at the rear of each unit to accept wall hanger brackets supplied with the assembly. Types N21, N116B, N116BK, N116BL and N116BLK have POWERKOTE Coils.

METERED KNOB types N116BK and N116BLK have metered knobs to conveniently measure load voltage without the necessity of providing a separate voltmeter. The knob is designed so that the voltmeter remains stationary as the knob is turned to vary the voltage, assuring accurate readings and maximum meter visibility.

FLEXIFORMER®

Packaged Transformer Primaries

TYPE TP150

When used as a source of a-c voltage, the center opening permits hand-threading the correct number of secondary winding turns to obtain the desired output voltage. When used as a current transformer, the unit winding is shuted by an ammeter which indicates the current flow in a conductor hand-threaded through the center opening. For 50/60 hertz duty.

RATINGS AS A SOURCE OF A-C VOLTAGE

TYPE	NORMAL PRIMARY VOLTS	Hertz	MAXIMUM VA	VOLTS PER SECONDARY TURN	REGULATION AT MAXIMUM OUTPUT

TP1020	320/1	800	2.5	1%

POWERSTAT

DC Motor Speed Controllers

Continuously adjustable speed control of d-c shunt-wound motors from a-c power lines. Full rated torque available at any speed. Instantaneous start, stop and reverse, tubeless transient-protected circuitry. Rated for 120 volt, 60 hertz single phase input. Type MSC16 for motors to 1/6 hp, type MSC33 to 1/3 hp and type MSC75 to 3/4 hp. NEMA frame 1725 rpm, dc motors in 1/6, 1/3 and 3/4 hp also available.

TYPE MSC33

MINIATURE AUDIO TRANSFORMERS — LA & LB SERIES

DIMENSIONS WITH SHIELD
O.D. 9/16 MAX.
H.T. 17/32 MAX.

Torotel "LB" Transformers are manufactured to MIL-T-27B, Grade 5, Class S specifications. This Series of "LB" Transformers have 0.1 grid spacing for printed circuit applications and .030 mounting surface to avoid a moisture trap. Leads are made of 20AWG tinned hard drawn copper. Unitizing Dumet wire are available on special request.

SUB-MINIATURE AUDIO TRANSFORMERS — LT, LS & LU SERIES

LU SERIES

LT, LS SERIES

LS, LT, and LU Series transformers have successfully passed the rigid requirements of MIL-T-27B, Class R, Grade 5.

Subminiature in size, weighting less than 0.1 ounce, these transformers have tenth inch grid spacing between terminals and are ideally suited for transistor circuit applications which utilize printed circuit board design. All three series have risers on mounting surfaces to facilitate inspection and board cleaning, and also to prevent moisture traps.

MAGNETIC SHIELDING

LS and LT Series transformers are available with magnetic shields when required. Overall dimensions of transformers with the magnetic shield added are .365 max x .465 max x .531 max.

To order transformers with shields installed add 500 to dash numbers shown in the table. For example: to order an LS-22 with shield, specify LS-522.

AUDIO TRANSFORMERS LW & LY SERIES

Series	A
LW	.900
LY	1.125

"LW" series transformers are manufactured to MIL-T-27, Grade 5, Class S specifications. Riser areas and 0.1 grid spacing make these units ideal for printed circuit board applications.

RESPONSE: ±1 DB 100 to 10,000 HZ

MINIATURE WIDEBAND TRANSFORMER

Used For:
Impedance Matching
Phase Detector
Wideband Interstage Coupling
Pulse Transformer
Voltage/Current Step-up or Step-down
Numerous other Applications

Time tested principles are combined with 20 years experience in the design and construction of inductive components in this series of transformers. The broad line of transformers listed below solves circuit coupling problems in today's transistorized equipment, and Z-Match transformers are standard components in many critical applications.

They have been qualified to MIL-C-15305C. Operating temperature range is —50°C to +85°C. VSWR is less than 1.3:1 and insertion loss is .5 db max. on all types. Power handling ability is 2W from the lowest frequency specified up to mid range and about 4 W over the high portion. Applicable bulletins are 567, 101 and 103.

LOW FREQUENCY SERIES

Fig. 1 LF Outline drawing

Slightly larger than the series above but usable at much lower frequencies is the LF line listed in the table directly below. These new units, which were designed at the request of our customers, utilize the proven construction techniques of the original Z-Match line and are produced with the same void-free encapsulation methods. The approximate constants as given above apply to the LF units. Applicable bulletin is 105.

WIDEBAND HYBRID JUNCTION/TRANSFORMER

Fig. 2 Hybrid as a conventional wideband transformer

These are true center-tapped, dc isolated transformers which can be used to design or construct singly or doubly balanced mixers and phase detectors. Other applications include vectoral addition and subtraction and power division and addition. They of course also give excellent performance as conventional wide band transformers where dc isolation is necessary. All have 4:1 impedance ratio with 50 Ohms unbal. primary to 200 Ohms balanced secondary. Physical size is shown in figure 4L of the schematic section on page 3. Applicable bulletin 368 gives comprehensive circuit information.

For other Vari-L products see Sections 1800 and 3400.

Z-MATCH

HYBRID APPLICATIONS

Fig. 3 Hybrid applications

3A: Signal applied at Terminal 1 appears at Terminals 2 and 3. Phase relationship 2 to 3 is 180°. Terminal 6 is isolated.

3B: Signal applied at Terminal 6 appears at Terminals 2 and 3. Phase relationship 2 to 3 is 0°. Terminal 1 is isolated.

3C: By reciprocity it can be correctly assumed from the above that the loads at Terminals 2 and 3 can be replaced by generators, and when the generators are in phase their combined outputs will appear at Terminal 6, and when they are 180° out of phase their combined outputs will appear at Terminal 1.

As illustrated, any of the six HYB transformer types may be used in the circuits in Figures 3A, 3B, and 3C.

POWER WIDEBAND TRANSFORMER

50 Watts (up to 1KW peak for pulses) power handling ability is provided in this series of rugged microstrip-compatible wideband transformers. Operating temperature range is −55 to +125°C, derated per figure 5 linearly at ½% per °C of the 25°C value. They are reciprocal and may be used for impedance/voltage step-up or step-down. Internal conductors will handle steady-state currents up to 4 amps. Applicable bulletins are 100 and 101.

TRANSFORMERS

Concerted attention, for almost forty years, to engineering, quality and reliabilty has made UTC a pioneer in the design and manufacture of iron core components. Physical constructions include metal cased, molded, encapsulated, potted, or open type units as required. Special and stock units for both transistor and tube applications are available for industrial requirements and military requirements to MIL-T-27C specifications. In addition, these units are unprecedented for ham, hi-fi, broadcast and replacement purposes. Ranges are: power transformers, milliwatts to 100 KVA; audio units, 0.1 Hz to 400 MHz . . . microwatts to 50 KW; pulse transformers, microwatts to 10 megawatts.

INDUCTORS

UTC's capabilities in range run from fractions of microhenries to many thousands of henries, limited only by the physical size of the unit. Almost forty years of specialization in the design and production of iron core components have resulted in UTC being a first source of supply for difficult units. Military to (MIL-T-27C) and commercial types are available in all standard UTC case configurations, plus units to your specifications. Metal cased, molded, encapsulated, open, and potted units of the highest quality and reliability are available. The largest engineering staff of its kind is supported by the most modern, fully equipped materials and test laboratories. In addition, extensive life testing and rigid quality control measures assure the advanced designing and high reliability associated with UTC products.

FILTER-AUDIO • CHARGING

MAGNETIC AMPLIFIERS

UTC has manufactured virtually thousands of special types of magamps, saturable reactors and reference transformers tailored to a variety of unique applications. Included are units both hermetically sealed to MIL-T-27C specifications, and of the commercial type. Power gains of over 400,000 are not unusual. Physical construction, including metal cased, molded, encapsulated, potted, or open type units are designed and produced to your specifications. A new stock line of magamps include compact, exceptionally stable, magnetically shielded units with an amplification of 40:1. These stock components, specifically designed for transistor application, are hermetically sealed to MIL-T-27C; one application is for control of 2 phase, 115 V., 400 Hz servo motors. Another new stock line, the "MAS" magamps operate on an input of 115 V 400 Hz with an output of ± 7.5 V DC, 1000 ohm load and have 2 isolated control inputs. These magnetic amplifiers afford a power gain of approximately 30,000.

DC TO DC CONVERTER TRANSFORMERS

Permits conversion of low voltage direct current to high voltage for operating mobile electronic equipment.

CATALOG NO.	DC INPUT VOLTS	DC OUTPUT VOLTS	DC LOAD AMPS
DD01001	6	12	4
DD01002	9	12	4
DD01003	6	9	4

These transformers are used in an efficient circuit using minimum components as it can be seen from the circuit diagram. Transformer used with this circuit gives a safe operation within −60° C to +70° C. The circuit remains highly efficient in either full load or fractional full load operation.

CATALOG NO.	DC INPUT VOLTS	TOTAL VA OUTPUT	TRANSISTORS	OUTPUT Bridge Volt	Bridge mA	CT Volt	CT mA	CONSTRUCTION
DD02004	28	125	Delco 2N174	500	250	250	420	GA
DD02005	12	125	Delco 2N442	500	250	250	420	GA
DD02006	12	40	Delco 2N442	450	90	225	155	FA

These transformers are used with relatively high load currents. With a low power saturating transformer the high power transformer can be linear so the circuit will prevent high collector current spikes. Recommended transistors are listed in the table. Feed back and starting resistor values will be supplied with every transformer.

These transformers are hermetically sealed and meet MIL-T-27B TF4RX09, electrical schematic diagram is legible on gray finished cans.

Aero PORTABLE CARTRIDGE LOADED MULTI-CODE TMCP SERIES

This is the NEW IMPROVED PORTABLE CARTRIDGE LOADED MULTI-CODE. The unit comes pre-packed with ten rolls of white acetate fiber tape with numbers from 0 to 9.

The unit conatins enough tape for 720 markings. The CARTRIDGE LOADED MULTI-CODE cartridges can be instantly loaded by snapping into the rear of the unit.

This tool is used exclusively by electrical contractors and plant electricians. The dispenser can be carried on the contractors pouch or clipped onto the belt, and only weighs 12 oz. fully loaded.

Aero CARTRIDGE LOADED MULTI-CODE DISPENSER TMCC SERIES

AERO DEVICES introduces this new CARTRIDGE LOADED MULTI-CODE DISPENSER. The very streamline design makes this bench unit extremely easy to use. All the numbers or letters are easily visible for quick identification and application. The tape cartridges snap in the rear of the unit in seconds.

This NEW CARTRIDGE LOADED MULTI-CODE can be used in AIRCRAFT, MISSILES, ELECTRONICS, MOTOR REPAIR SHOPS, FACTORY ELECTRICAL MAINTENANCE and ELECTRICAL CONTRACTORS.

Aero MULTI-CODE DISPENSER TMCD SERIES

This MULTI-CODE DISPENSER offers the easiest and fastest way to code your wires. The cabinet is constructed of heavy steel, finished in black baked coritex. The top is secured with a piano hinge which closes flush — no dust or drying of tape to worry about.

Here are some typical areas in which our wire marking system is used; AIRCRAFT and MISSILE ASSEMBLY, ELECTRONICS, MOTOR REPAIR, FACTORY ELECTRICAL MAINTENANCE, ELECTRICAL CONTRACTING, ETC.

easy wire and cable identification

with **aero devices**

multi-code wire and cable identification systems

ADI multi-code marking tapes will do what you want it to do. Tapes come in letters, numbers or vivid colors for easier identification. Available with High-TAC adhesive for permanent marking or LOW-TAC adhesive for easy removal. All tapes are packaged in boxes to ensure freshness and tape longevity. Shelf life of tape is approximately 1 year.

Specify the tape you need . . . or tell us the specific job its needed for — let our research department help you.

Alpha Wire a division of Loral Corporation

The Complete Line of WIRE, CABLE & TUBING FOR ELECTRONIC APPLICATIONS

- HOOKUP WIRE TO MIL-W-16878D, MIL-W-76B
- TEFLON® WIRE AND CABLE
- AIRCRAFT WIRE TO MIL-W-5086A
- COMPLETE LINE OF RG COAXIAL CABLES
- CONTROL & INSTRUMENTATION CABLE
- TELEMETERING CABLES
- MICROPHONE CABLES
- AUDIO CABLES
- SERVICE & POWER CORDS
- RETRACTILE COIL CORDS
- SHIELDING & BRAIDING
- HOOKUP WIRE TO U.L. & C.S.A. SPECIFICATIONS
- TV, AND ROTOR CABLE
- PLASTIC TUBING
- TEFLON® TUBING
- ZIPPER TUBING
- LACING CORD & TAPES
- FIT® SHRINKABLE TUBING

Belden has it...

Every electronic and electrical wire you need—from the finest drawn magnet wire to the most complex multi-conductor cables.

There is a Belden wire or cable in every insulation and shielding to meet your application and design needs. Here is just part of this complete line. Available from stock. Ask your Belden electronics distributor for complete line information or write for catalog. Request also a copy of A Buyers' Guide to Specifying Electrical Wire and Cable.

3 REASONS WHY Belden is the most specified line

1. **Basic Manufacturer**—Belden draws its own wire—compounds its own insulations for complete quality control.
2. **Research and Testing**—All Belden wire and cable are laboratory tested to guarantee insulation and conductor efficiency. Lab test data available.
3. **Design and Engineering Service**—Belden has a completely staffed design and engineering department to help customers meet unusual wire application or design requirements.

PLASTICOTE WIRE & CABLE BY CHESTER

COAXIAL CABLE — Chester Cable Corp. offers a complete line of coaxial cable for military and commercial applications. Manufactured in accordance with MIL-C-17, JAN-C-17 and commercial specifications. Constructions include solid, air-spaced and foam dielectrics with conventional braid shields or flat copper tape shields, having PVC or polyethylene jackets. Custom designed constructions of triaxial cable and high frequency-high voltage cable are also available.

MULTI-CONDUCTOR CABLE — Wide range of custom designs available, manufactured in accordance with such industry standards as MIL specs., U/L, CSA, IPCEA, EIA, IMSA, ASTM, etc.

Chester Cable Corp. is a preferred source for quality electronic and electrical cable, insulated and jacketed with thermoplastic materials such as polyvinylchloride, polyethylene and nylon. Custom designs of shielded or unshielded cable include: Control Cable · TV Camera Cable · Missile Cable · Intercom Cable · Computer Cable · Special Hi-Voltage Cable and Parallel Bonded Ribbon Cable.

MIL-SPEC WIRE — Made in accordance with specifications MIL-W-16878 (Types B, C & D), MIL-W-76B (Types LW, MW & HW) and MIL-W-5086A for electronic systems. Available in single or multiple constructions, shielded or unshielded, with or without nylon or PVC jackets.

WIRE AND CORD FOR THE APPLIANCE INDUSTRY — U/L and CSA approved, 60°C — 80°C — 90°C — 105°C appliance wiring material — SVT, SJT, ST cord, SJTO & STO oil-resistant cord, SJT & ST oil-proof cord, SPT cord with or without individually insulated ground wire. Used for washers, dryers, refrigerating, air conditioning, vending, heating, X-ray and other electrical and electronic equipment.

RADIO AND TV CIRCUIT WIRE AND CABLE — U/L and CSA approved, 60°C — 80°C — 90°C — 105°C appliance and radio circuit wire, microphone cable, shielded and unshielded audio circuit wire, twin lead antenna wire, phonograph cable, parallel-bonded color convergence ckt. cable, braided hook-up wire, hi-anode wire, hot chassis lead, balun-coil wire, shielded constructions with spiral, braided, aluminum-Mylar tape and conductive materials; all available in Thrif-T-Bond® tinned over-coated conductors.

MISCELLANEOUS WIRE AND CABLE—Machine Tool Wire · Bus Drop Cable · Flexible Test Lead Wire · Municipal Signal Cable · Low Energy Circuit Control Cable · Station Control Cable · Inter-Office Communication and Signaling Cable · Deep-Well Submersible Water Pump Cable · Gas Tube Sign and Oil Burner Ignition Cable · Intercom Cable · Gasoline and Oil Resistant Wire · Computer Cable · Uninsulated Bus Wire · Parallel and Jacketed Cord · Braided Ground Strap, and special custom designed cable for your applications.

Specifications:

INPUT SERVICE: 115V ±5%, 1ø, 47-65 Hz.

OUTPUT CONFIGURATION: Single phase, 2 wire floating.

OUTPUT VOLTAGE: Adjustable 0-125 volts rms by front panel gain control; full power available at 110-125 volts.

DUTY CYCLE: Continuous duty at rated output.

EXTERNAL SIGNAL: 5 volts rms required for rated output. Signal input impedance 600 ohms single ended.

METERS: Output voltmeter is furnished as standard equipment on model NS350. Voltmeter is available as accessory for models NS70, NS120 & NS175; specify suffix (—V).

TERMINATIONS: Output terminals are furnished both front and rear, five way binding posts on front and barrier strip on rear. Input power termination is rear mounted barrier strip. Signal input is via jack mounted on front panel.

CONSTRUCTION: Standard 19" rack mount construction with full dust covers. Bench adapters available as accessory; specify suffix (—C).

****AUDIO AMPLIFIER ONLY:** Each model is also available as an audio power amplifier only (without a built-in oscillator) with a full power range of 45-6000 Hz. All standard models (with or without oscillator) include an input signal jack for use with external signal source. Specify the Basic Power Supply Model and Suffix # (—JA) if oscillator is not required.

Specifications:

OUTPUT CONFIGURATION: Single Phase, 2 wire floating.

OUTPUT VOLTAGE: Adjustable 0-125 Volts; full power available at output of 110-125 Volts.

DUTY CYCLE: Continuous duty at full rated output.

PROTECTIVE CIRCUITS: All models are equipped with instantaneous overload protection and front panel reset.

METERS: All standard models are furnished with front panel meters to monitor output voltage and plate currents of final amplifier tubes.

EXTERNAL SIGNAL: Signal input voltage of 5 volts rms required for full rated output. Signal input impedance 600 ohms, single ended.

OUTPUT & INPUT TERMINATIONS: Units rated at 500VA to 2000VA include output terminals on front and rear, five way binding posts on front and barrier strip on rear; input power termination is rear mounted barrier strip.

Models N5000A and N15000A have input and output terminals accessible via knockouts at cabinet rear.

CONSTRUCTION: Models rated 500VA to 2,000VA are standard 19" rack mount units with full dust covers. Bench adapters available as accessory for these models; specify suffix (—C). Side support is recommended for rack mount models. Slides available as optional accessories; specify suffix (—S). 5 KVA and 15 KVA models are furnished complete in cabinet enclosure. 5 KVA model includes casters.

NEW FOR 1970

solid state AC power supplies
ST series

- 3 models rated at 600, 1250 & 2500 VA Single Phase Output
- All models can be stacked for 2 Phase or 3 Phase Operation
- 45 to 10,000 Hz Frequency Range
- Interchangeable Plug-in Oscillators with Fixed or Adjustable Frequencies. Frequency Stabilities to 0.001%
- Selectable Output Voltage Taps
- Minimum Package Sizes
- Complete Short Circuit and Thermal Protection

CML three phase AC power supplies

- **Minimum Package Sizes** . . . 2500 VA in 14" rack height.
- **Interchangeable Plug-in Oscillators** . . . 23 standard oscillators are available—to provide fixed or adjustable output frequencies between 45 and 6,000 Hz and stabilities to ±0.001%.
- **Instantaneous Overload Protection** . . . An overload of any one phase causes complete output shutdown, protecting 3 phase load.
- **Dual Output Voltage for △ or Y Loads** . . . Adjustable voltages 0-125 volts line-to-line as well as 0-217 volts line-to-line are presented at output terminals; output is isolated for maximum versatility.
- **Constant Voltage Output** . . . 0.5% regulation for no load to full load change.
- **Response time less than 50 microseconds.**
- **Output Voltage** unaffected by unbalanced loads.

Specifications

OUTPUT CONFIGURATION: Three Phase, 4 wire wye, neutral floating.

OUTPUT VOLTAGE: 0-125 Volts line-to-line and 0-217 Volts line-to-line; both sets of terminals are presented at output. Full power available at output of 110-125 volts and 190-217 volts. Master gain control and phase 2 and 3 trim controls provided on front panel.

OUTPUT POWER: Rated output power for each model is shown in chart above. Maximum power per phase is ⅓ of 3ø output.

LOAD POWER FACTOR: 0.7 lead or lag to unity at rated output; wider power factor range with slight derating.

FREQUENCY RANGE: Each amplifier model is rated at full power 45-6,000 Hz except for the models T15000A and T20000A which have a 300-500 Hz full power range. The operating output frequency range is determined by the particular plug-in oscillator which is used.

HARMONIC DISTORTION: Less than 3% over the entire 45-6,000 Hz amplifier range; less than 1%, 300-1000 Hz.

HUM AND NOISE: 60 db below maximum output voltage.

OUTPUT PHASE SEPARATION: 120 ±1° for fixed frequency models as well as 350-450 Hz models. 120 ±2° for 45-70 and 300-2,000 Hz models. 120 ±3° for 45-6,000 Hz models.

CONSTRUCTION: Models rated 150VA to 2500VA are standard 19" rack mount units with full dust covers. Bench adapters available as accessories for these models; specify suffix (—C). Side support is recommended for rack mount models. Slides are available as optional accessories; specify suffix (—S). 5KVA-20KVA models are furnished complete in cabinet enclosure. 5KVA model includes casters.

Single Phase & Two Phase Output

Standard 3 phase amplifiers may be used to provide a 2 phase output at ⅔ of rated output power. Special plug-in oscillators are available with selectable 90° or 120° phase separation for 2 phase or 3 phase operation respectively.
Standard 3 phase amplifiers may be used to provide a single phase output at 57% of rated output power over an adjustable voltage range of 110-125 volts.

*Models A1K and A2K are standard 19" rack mount units; bench adapters available on special order. All other models are furnished complete in cabinet enclosures. Models A3K, S5K and B5K include casters.

Specifications:

FREQUENCY RESPONSE: ±0.5 db, 100-10,000 Hz; model A3K ±0.5 db 200-15,000 Hz. Other frequency ranges between 5 Hz and 100 KHz available on a custom basis.

HARMONIC DISTORTION: Less than 3% over rated frequency range; less than 1.5% midband.

HUM & NOISE: At least 60 db below rated tap voltage.

ultrasonic power amplifier model HS1K

1000 VA output from **10 KHz to 1 MHz**

NEW FOR 1970

- Full Rated Output into Load Power Factors of 0.4 Lead or Lag to Unity
- Continuous Duty Capability at Full Rated Output
- Suitable for operation with Keyed Input Signals
- Hum and Noise at least 60db below Tap Voltage
- Compact, rugged construction

solid state power amplifier model LSU1000

- Ideal for shipboard applications Compact, rugged construction.
- 1000 VA Output Continuous Duty
- 100 Hz to 20 KHz Frequency Range
- Selectable Output Voltage Taps: 90/180/270/360/540/1080 VAC
- Full Rated Output into Load Power Factors of 0.4 Lead or Lag to Unity
- Hum and Noise at least 70db below Tap Voltage
- Complete Short Circuit and Thermal Protection

Products Manufactured by Sigmund Cohn Corp.

Metallurgists and Manufacturers ... Since 1901

PRECIOUS METALS

Potentiometer Wire . . . A series of precious metal alloys resistance range 29 to 550 ohms per circular mil foot. High **corrosion resistance,** assuring potentiometers of great reliability, and freedom from noise. Bare or enameled.

Platinum Wire for Resistance Thermometers . . . Platinum wire having a temperature coefficient of resistance — (when fully annealed) — at .003926 per degree C. (0-100°C.).

Alloys for Semiconductors . . . Gold Semiconductor Wire for Wedge, Ball and Ultrasonic Bonding. Sheet fabricated into discs, squares, etc. . . Gallium-Gold and Antimony-Gold for evaporation.

Bridge Wires for Electro Explosive Devices . . . Made from Noble metals, Noble metal alloys, and base metals to very fine sizes. Resistance and degree of hardness closely controlled. In MIL standards and commercial requirements.

Platinum, Platinum-Rhodium Thermocouple Wires . . . Calibrated to match the emf values given in National Bureau of Standards circular #561 of April 27, 1955. In two qualities, Standard Grade matching NBS values within limits of ±0.25% and Reference Grade ±0.1%.

Iridium, Iridium-Rhodium Thermocouple Wires . . . Temperatures as high as 2000°C. may be measured, even in an oxidizing atmosphere. Also available in strips and foil.

Taut-Band Ribbon . . . An alloy of **Nickel-Platinum** for rugged, bearing-free electrical measuring instruments.

Galvanometer Suspension Ribbon . . . Gold alloy strip for conventional construction.

PLATING SOLUTIONS

Rhodium . . . Rhodium produces a hard, thin, white and highly reflective electrodeposit, with excellent corrosion resistance. Used for wave guides, electrical contacts, other applications.

Gold Potassium Cyanide is supplied either as a **dry salt** or in **aqueous solution,** for various plating baths.

Write for comprehensive bulletins containing detailed information on each specific product.

SPECIAL WIRES

Enameled Aluminum Wire . . . Very small sizes to .0006"; for light-weight galvanometer coils and similar applications. Also available bare.

Electroplated Wire and Ribbon . . . We specialize in continuous electroplating of wire. Regularly electroplate Gold, Silver Platinum, Indium, and Tin onto base wire or ribbon, such as, Molybdenum, Nickel, Copper and Clad Wires. Gold Plating to MIL-G-45204.

Enameled Wire . . . Our enameling process consists in applying multiple coats of a baked thermosetting resin, either Class A, B or H. It is thinner than most commercial enamel coating; smooth, uniform, free from beads. Excellent for **potentiometers.**

Aluminum Alloy Bonding Wires . . . for ultrasonic bonding of new hybrid and monolithic semiconductor devices . . . Common alloys: Aluminum 1% Silicon; Aluminum 1% Magnesium; #1100 Aluminum; also pure Aluminum (99.999%). In ribbon as well as wire.

PYROFUZE® PRODUCTS

Pyrofuze . . . A bimetallic composition, the elements of which at 650°C. alloy violently and exothermically resulting in deflagration without support of oxygen. Available in a variety of physical forms, this material has found great application in the aerospace, ordnance, and electronic industries. In ignition, fire transferral, separation and current interrupting devices.

MEDWIRE PRODUCTS

Teflon-coated, Iridium-Platinum alloy wires — also Silver and Stainless Steel wires — for microelectrode probes . . . Rigid, strong, corrosion-resistant . . . Wide range of diameters . . . Send for data.

COLEMAN CABLE & WIRE CO.

1900 N. FIFTH AVE., RIVER GROVE, ILL. 60171 (312) 456-4000

CUSTOM WIRE & CABLE — COPPER OR ALUMINUM CONDUCTOR

Our unique position in the wire and cable industry enables us to offer a *complete service* to our customers. Available to you, for immediate delivery from the nation's largest inventory, is virtually every conceivable type of electronic and communication wire and cable to meet an infinite variety of military, commercial and industrial needs.

In addition, our proven engineering and manufacturing capability is at your service for the production of the most exacting custom wire and cable, as well as your special wire products such as Cable Assemblies, Wiring Harnesses, Cut Leads (stripped, tinned) and Cord Sets. Staffed by experienced personnel and utilizing the industry's most modern equipment, Coleman can promptly and economically produce the wire, cable and wire products you need — no matter how large the run.

Columbia- the complete wire and cordset line.

Whatever you need wire, cable and cordsets for – automated systems, instrumentation, communications, aerospace, military, or consumer projects – Columbia has the right product for you!

COLUMBIA

All top quality, it can be delivered promptly from inventories of over 100 million feet located across the country.

What's more, Columbia has a complete custom service capable of producing wire, cable, and cordsets to your exact specifications in any combination of conductors up to 2″ in diameter. For full information on the complete Columbia line, write the nearest Columbia Electronic Cables sales office: 150 Hamlet Ave., Woonsocket, R.I. 02895; 1950 Naomi Ave., Los Angeles, California 90011.

Columbia Electronic Cables

a division of AVNET, INC

CRM a single source for electronic grade preforms and fine wire of pure metals and special alloys

CRM specializes in the manufacture of precision wire and preforms for use in electronic components and semiconductor devices. In order to assure conformance to the most rigid specifications, even metals purification and alloying are done within CRM's own plant. Hundred of stock dies supplement extensive tool-making facilities, permitting fast and inexpensive fabrication of custom sizes and shapes. Appropriate physical, chemical, and performance tests are used at all stages of production to assess and certify both the quality and usability of CRM products. CRM preforms and wire are available from stock or are custom fabricated to meet all your specifications.

WIRE from CRM is available in all varieties required for electronics, semiconductors, and electrical instruments to any specification. Thus, pure Gold may be obtained in 5-9's purity for vapor deposition or lower purity for bonding. Tensile strength and other physical properties can also be varied, even to match particular wire bonding machines. Various doped Gold wires are also available. Similarly, standard and custom wire of pure metals and special alloys are produced by CRM for other semiconductor applications, resistance thermometers, potentiometers, strain gauges, galvanometers, thermocouples, and for experimental applications. All wire can be supplied with any type of enamel or plated, or bare.

Gold bonding wire • silicon-aluminum bonding wire • pure vapor deposition wire • potentiometer wire • platinum resistance thermometer wire • fuse wire • strain gauge wire • enameled wire • plated wire

CRM WIRE CAN HELP YOU MAKE A BETTER PRODUCT.

PREFORMS from CRM range from simple solder washers to precisely sized perfect spheres of high purity gold for semiconductor mounting and special frames for flatpack assembly. Quality is controlled at every processing step to meet customer specifications. For example, Gold spheres are available in either 4-9's or 5-9's purity in sizes from .008″ to .040″ with sphericity controlled to ±.001″. All spheres are checked optically to assure perfect surface finish; they are weighed to assure uniform density, and they are rolled down an inclined plane which automatically rejects all spheres which are out of round. CRM makes preforms from precious metals and alloys, Aluminum and Aluminum alloys, brazing alloys, and soft solders. Over 300 stock dies are on hand to permit custom fabrication without tooling charges.

Discs • rectangles • washers • frames • solder • braze • eutectic gold alloys

CRM PREFORMS CAN HELP YOU MAKE A BETTER PRODUCT.

Call or Write for a useful Data Book and Catalog of CRM Fine Wire and Precision Preforms, and for a quotation on your special requirements.

NEW

HI-VOLT CORONA RESISTANT TEFLON* CABLE

Voltage Rating at Sea Level • Voltage Rating at 80,000 feet, approximately 1/3 lower

• Minimum life expectancy: 10,000 hours.

SMALL SIZE:
You do not need bulky, thick, insulation jacketing as used wtih silicone rubber and polyethylene insulations to get your hi-voltage requirements. Wire used is MIL-SPEC QQ-W-343 and MIL-W-16878D. insulation used conforms and surpasses MIL-SPEC-W-16878D

AVOID CORONA PROBLEMS:
Corona resistant Teflon construction is specifically designed to retard and prevent corona penetration.
Temperature variations from −60° to +300°C have no life effect on the corona resistant Teflon. In addition, there is no stress or crack failure under severe, adverse conditions including mechanical strain, moisture, corona or chemical conditions.

DESCRIPTION:
Single Conductor, Stranded Silver Plated Copper, Corona Resistant Teflon* Insulation.

TEMPERATURE RATING:
−90°C to +250°C.

VOLTAGE RATING:
Based on insulation thickness.

AVAILABLE COLORS:
White, Black, Red, Green, Yellow, Lt. Blue, Brown, Orange, Gray, Violet. (Also available in tracer colors)

PUT-UP: 250′, 500′, 1000′

NEW KYNAR INSULATED HOOK-UP WIRE *for Wire Wrap Applications*

Especially Suited for Computer, Business Machine Usage and Other Areas Where Space is Limited

(FOR AUTOMATIC POINT TO POINT TERMINATION APPLICATIONS)

U.L. APPROVED

ENLARGED 20 TIMES

The miniaturization of computers and business machines has created special problems in the wiring of components and associated programming equipment. Essentially there is a need for wire with a tough insulation that is resistant to abrasion and cold flow. It should function at operating temperatures up to 125°C. The wire wrap type of termination requires a high conductivity low corrosive surface on the conductor. Dearborn Kynar insulated wire fulfills these needs.

SPECIFICATIONS:

The conductor is OFHC (Oxygen Free High Conductivity) Annealed Copper, Silver Plated.
The insulation is Kynar*, a Vinylidene Fluoride Plastic with unique characteristics.

KYNAR CHARACTERISTICS:

- **Mechanically Tough**
- **Flame Retardant, Self Extinguishing**
- **Excellent Resistance to Ultraviolet Light and Weathering**
- **Operating Temperature Up to 125° Continuous, Assigned U.L. Rating 105°C.**
- **Exposure to 300 Million Roentgens Does Not Change Insulation Characteristics**
- **Vivid Colors for Easy Identification**

* Pennwalt Chemicals Corp. Trademark

Dearborn P/N.	AWG Size	Insul. Thk.	Nom. O.D.	UL Style	Stock Colors Available

All supplied on specially designed large hub reels, 1,000′ minimum

Code Coloring: 0—Black • 1—Brown • 2—Red • 3—Orange • 4—Yellow • 5—Green • 6—Blue • 7—Violet • 8—Gray • 9—White

- All Kynar wire listed is supplied on 1000 ft. putups on **Large** Hub Diameter reels 8½″ O.D. and 10⅝″ Flange to eliminate curvature set in wire and to function properly in the automatic equipment used for application.
- Larger putups on the same reel can be supplied from Factory stock and additional colors are also available from Factory on special order.

HEAVY DUTY VEHICLE CABLE

MANUFACTURED IN ACCORDANCE WITH MIL-C-13486B • TYPE 1 • CLASS A

SINGLE CONDUCTOR • HEAVY DUTY • SPECIAL PURPOSE

CONSTRUCTION

Tinned Copper, Stranded Conductor, Rubber Insulating Core, Inner Glass Braid, Black Neoprene Jacket.

Ordnance Part Number, Gauge and Manufacturer's Name Stamped on Outer Jacket.

USAGE

For use on all types of military ground vehicles, such as tanks, trailers and trucks.

CHARACTERISTICS

Excellent flexibility even at low temperatures and resistance to abrasion, fluids and weather allows use in exposed situations; fungus resistant.

MIL SPEC MIL-W-16878D HOOKUP WIRE-TYPES B & C

Single conductor, stranded tinned copper

TYPE B
Insulation PVC .010″ wall thickness, color coded. **Temperature rating:** −55°C to +105°C. **Voltage rating:** 600 volts.

TYPE B — PREBONDED
Double tinned strands are heated which fuses the individual strands together in order to prevent fraying.. Allows easy stripping and insertion in holes in lugs, circuit boards, etc. Color coded .010″ PVC insulation to MIL-W-16878D. **Temperature rating:** −55°C to +105°C. **Voltage rating:** 600 volts.

DEARBORN

TEFLON INSULATED AIRCRAFT, MISSILE AND ELECTRONIC WIRE AND CABLE

MIL-W-16878D, TYPE ET
Voltage rating: 250 volts. **Temperature rating:** −65°C to +200°C. Single conductor stranded silver plated copper, extruded TFE Teflon insulation.

MIL-W-7139B, CLASS I WIRE
Voltage rating: 600 volts. **Temperature rating:** −65°C to +200°C. Silver plated copper, insulated with layers of TFE Teflon, interspersed with layers of Teflon impregnated fiberglass. Color is white with blue tracer. Teflon impregnated fiberglass braid overall.

MIL-W-7139B, CLASS II, WIRE
Voltage rating: 600 volts. **Temperature rating:** −65°C to +260°C. Nickel coated copper, insulated with layers of TFE Teflon, interspersed with layers of Teflon impregnated fiberglass. Color is white with orange tracer. Teflon impregnated fiberglass braid overall.

- **All Teflon wire and cable listed here is resistant to acids, alkalis, oil, flame, moisture, solvents, fungus, aircraft fuels, hydraulic fluid, skydral, ethylene glycol and alcohol.**

DEARBORN

MIL-W-16878D TEFLON* HOOKUP WIRE

TYPE E, 600 VOLT
Single conductor, stranded or solid silver plated copper, extruded TFE Teflon insulation. **Voltage rating:** 600 volts. **Temperature rating:** −65°C to +200°C.

TYPE EE, 1000 VOLT
Same as Type E, except for insulation thickness and voltage rating of 1000 volts.

TYPE E, SPIRAL WRAPPED FUSED TEFLON
Same as Type E — 600 volt but with spiral wrapped fused Teflon insulation.

TYPE EE, SPIRAL WRAPPED FUSED TEFLON
Same as Type EE, but with spiral wrapped fused Teflon insulation.

TYPE E, 600 VOLT

MIL-W-16878D SHIELDED TEFLON* CABLES

DEARBORN

Each conductor stranded silver plated copper, Type E extruded TFE Teflon .010″ color coded insulation. Braided silver plated copper shield 90% coverage. **Voltage rating:** 600 volts. **Temperature rating:** −65°C to +200°C. Resistant to acids, alkalis, oil, flame, moisture, solvents and fungus.

*Dupont T.M.

- **NO OUTER COVERING OVER SHIELD.**
- **TEFLON IMPREGNATED BRAID OVER SHIELD**
  Braided natural or white Teflon impregnated fiberglass braid overall.
- **FEP EXTRUDED JACKET OVER SHIELD**
  Tough abrasion resistant extruded white FEP Teflon jacket overall.
- **TEFLON TAPE WRAP JACKET OVER SHIELD**
  Sintered wrapped white Teflon tape jacketed overall.

NO OUTER COVERING OVER SHIELD

ITT IRRAVIN™ Insulated Military and U/L Hook-up Wire and Cable

IRRAVIN, irradiation cross-linked insulation developed by ITT Wire and Cable, meets the tough requirements of today's electronic, aerospace, airframe and data processing industries. Through precisely controlled electronic bombardment a PVC compound becomes solder-iron resistant, abrasion resistant, cut-through and crush resistant IRRAVIN insulation. It has the desired characteristics of other high temperature wires with the **added** advantage of low cost, continuous long lengths, ease of handling and universal application.

IRRAVIN insulated wires can be used for internal circuit hook-up, harnesses bundles as well as being advantageously used with automatic wire wrapping machinery. For those applications, the tough IRRAVIN insulation possesses superior electrical, mechanical and thermal characteristics as compared to conventional PVC.

HEAT RESISTANCE — Withstands high ambient temperatures. Resists solder iron damage. Eliminates shrink-back, flowing and dripping of insulation.

ABRASION AND CUT-THROUGH RESISTANCE — IRRAVIN insulation has improved mechanical properties. Eliminates the need for outer jacketing. This results in superior space and weight savings advantages.

CRUSH RESISTANCE — IRRAVIN insulation has 50% more crush resistance than PVC insulation . . . 200% more than TFE insulation. This means extra reliability in wire bundles and harnesses, because ties and lacings will not cut through the insulation.

LONG LENGTHS — Long continuous lengths of IRRAVIN insulated wire are available at no extra cost . . . Fewer shipping spools, less storage space needed, and fewer automatic machine set-ups.

UNIVERSAL APPLICATIONS — IRRAVIN insulated wire conforms to military specification MIL-W-16878, types B, C and D, and is listed by Underwriters' Laboratories, Inc. for styles 1429, 1430 and 1431.

LOW COST — Saves you up to two-thirds the cost of other high temperature wire. Its universality reduces inventories especially if used with in-house striping machinery for color coding.

IRRAVIN WIRE CAN BE PRINTED, PAINTED, POTTED AND STRIPED USING CONVENTIONAL PROCESSING EQUIPMENT.

U/L STYLE 1429 80°C BUSINESS MACHINE WIRE

Description: Thin wall IRRAVIN B insulation on tinned copper or overcoated tinned copper stranded or solid conductor. Resistant to deformation and hot solder iron damage.

Application: Internal wiring of business machines, computers and maintenance of equipment.

Temperature: −55° to +80°C.

Rating: 300 Volts r.m.s.

Available: Stranded: Sizes AWG 28 through 16 in a selection of strandings. **Solid:** Sizes AWG 26 through 20.

See illustration (A) *or* (B)

U/L STYLE 1430 APPLIANCE WIRE

Description: 1/64 inch wall of IRRAVIN C insulation on tinned copper or overcoated tinned copper stranded or solid conductor. The only type 1430, 300 Volt appliance wire without a nylon jacket, yet resistant to abrasion, deformation and cut through.

Temperature: −55°C to +105°C. Can be used to 125°C for intermittent service.

Rating: 300 Volts r.m.s. for appliances 600 Volts for electronic equipment.

Available: Stranded: Sizes AWG 26 through 16 in a selection of strandings. **Solid:** Sizes AWG 24 through 16.

See illustration (A) *or* (B)

600 VOLT MIL-SPEC HOOK-UP WIRE

Description: Thin wall IRRAVIN B insulation on tinned copper conductor.

Certified to: MIL-W-16878 Type B.

Temperature: −55°C to +105°C. Intermittent service at higher temperatures.

Available: 30 AWG through 14 AWG stranded.

See illustration (A)

(A)

IRRAVIN insulation over stranded tinned copper conductor

(B)

IRRAVIN insulation with overcoated tinned copper conductor

1000 VOLT MIL-SPEC HOOK-UP WIRE

Description: Medium wall IRRAVIN C insulation over tinned copper conductor. Has outstanding resistance to corona attack at high peak A.C. voltages.

Certified: MIL-W-16878 Type C.

Temperature: −55°C to +105°C. Intermittent service at higher temperatures.

Available: 26 through 12 AWG stranded.

See illustration (A)

600 & 1000 VOLT MIL-SPEC HOOK-UP WIRE WITH OVERCOATED TINNED CONDUCTOR

Description: Insulated with IRRAVIN B for 1000 Volt application with overcoated tinned copper stranded conductors. Eliminates tinning operation after stripping away insulation. Prevents wire ends from fraying.

Certified: MIL-W-16878 Types B and C.

Temperature: −55°C to +105°C. Intermittent service at higher temperatures.

Available: 24, 22, and 16 AWG stranded.

See illustration (B)

ITT Electronic Wire and Cable

. . . broadest wire and cable line available
. . . over 23,000 manufactured types
. . . more QPL listings than any other manufacturer

(A) MILITARY HOOK-UP WIRE

Military specification MIL-W-16878D is universally accepted for general purpose hook-up wire. It covers performance requirements for wires insulated with polyethylene, PVC, Silicone, TFE Teflon and FEP Teflon and IRRAVIN™ insulation. ITT Wire and Cable manufactures all of these constructions as listed in MIL-W-16878D. Polyethylene and PVC insulated wires can be ordered with nylon jacketing over the insulation.

Wires can also be manufactured to the following military specifications:

MIL-W-76B	MIL-W-81044	MIL-C-27500
MIL-W-22759	MIL-C-7078	

(B) UNDERWRITERS' LABORATORIES, INC. LISTED HOOK-UP WIRE

Hook-up wire, as listed by U.L. specifications and the Canadian Standards Association, requires a heavier wall thickness for equivalent voltage rating as compared to military specifications.

ITT Wire and Cable manufactures a broad line of U.L. wires and maintains a stock of the following U.L. styles:

1007	1015	1429
1010	1061	1430
1011		1431

(C) AIR FRAME WIRE

ITT Wire and Cable is a major producer of wire for the aviation and aerospace industries. Here are a few of the military specification wires manufactured for airframe and aerospace applications.

MIL-W-81044	MIL-W-22759
MIL-W-5086 All Types	MIL-W-8777

(D) AUTOMATIC WIRE WRAP WIRES

ITT Wire and Cable offers two types of wire insulation for automatic wire wrapping of computer back-panel assemblies.

SURFLENE B—A modified fluorocarbon insulation tough enough to resist cut through but flexible enough to prevent "pop-up" problems that often occur in wires used on automatic wire wrapping machines. It has outstanding thermal and chemical characteristics, and is rated at −40°C to +135°C. Manufactured in 24 through 30 AWG sizes.

IRRAVIN B — This irradiation cross-linked polyvinyl chloride compound provides increased mechanical toughness even when applied in a thin wall of 0.0065″. It is extremely hard, slick, and crush resistant. Solder iron contact will not melt or deform this insulation. It is especially suitable for wire wrap machine applications because of low cost, stable electrical characteristics, small diameter, and longer lengths. Manufactured in 24 through 30 AWG sizes. (See IRRAVIN information)

Please contact the ITT Wire and Cable Division for specific technical assistance.

(E) COAXIAL CABLES

ITT Wire and Cable designs and manufactures coaxial cables with special alloys, solid or stranded conductors and uniquely compounded dielectric materials which possess low loss factors. There are endless varieties of conductors, dielectric materials, shieldings and jacketings available to the design engineer who requires a particular coaxial cable. RG/U tables of the ITT manufactured standard line coaxial cables are listed in catalog CP-1 available on request.

(F) SILICONE RUBBER HIGH VOLTAGE WIRE

ITT Silicone rubber insulated wire for high voltage applications has a superior resistance to high temperature and corona. Silicon rubber remains flexible at −65°C and can be subjected to 175°C temperature for short periods without detrimental effects. High voltage cables for 10-30 KV D.C. use are also offered. These cables are listed in catalog CP-3 available on request.

ITT electronic wire and cable distribution centers:
Clinton, Mass. • Atlanta, Ga. • Commerce, Calif. f.

Insulating Tubings and Sleevings-High Temperature Wire and Cable

FLEXLEAD®

High temperature Wire and Cable insulated with Teflon (TFE or FEP) or silicone rubber. You can select a numbered FLEXLEAD type listed below, or let Markel quote, to your specifications, on a custom FLEXLEAD construction.

MIL-W-16878D

Type E—600 v. Stranded silver-plated copper insulated with extruded DuPont Teflon TFE
Type E—600 v. Stranded silver-plated copper insulated with wrapped and sintered Teflon TFE tape
Type EE—1000 v. Stranded silver-plated copper conductor insulated with extruded Teflon TFE
Type EE—1000 v. Stranded silver-plated copper insulated with wrapped and sintered TFE tape
Type ET—300 v. Stranded silver-plated copper conductor insulated with extruded Teflon TFE
Type ET—300 v. Stranded silver-plated copper insulated with wrapped and sintered TFE tape
Type K—600 v. Stranded silver-plated copper conductor insulated with extruded Teflon FEP
Type KK—1000 v. Stranded silver-plated copper conductor insulated with extruded Teflon FEP
Type KT—300 v. Stranded silver-plated copper conductor insulated with extruded Teflon FEP
Type F—600 v. Stranded tin-coated copper conductor insulated with extruded silicone rubber
Type F—600 v. Same as Type F above, jacketed with silicone resin-impregnated fiberglass braid
Type FF—1000 v. Stranded tin-coated copper conductor insulated with extruded silicone rubber
Type FF—1000 v. Same as Type FF above, jacketed with silicone resin-impregnated fiberglass braid

U/L APPROVED

Extruded Teflon Wires, sizes 10-28 AWG; 80°C to 200°C ratings; 300 and 600 volt ratings: U/L Style Nos. **1164, 1180, 1198, 1199, 1212, 1213.**

Extruded Silicone Rubber Wires, various constructions, with and without fiberglass jackets; sizes 10-32 AWG; 150°C and 200°C ratings; 300 and 600 volt ratings: U/L Style Nos. **3066, 3067, 3068, 3069, 3070, 3071, 3074, 3075, 3101, 3113, 3122, 3123, 3132, 3133, 3134, 3135, 3136, 3137, 3138, 3139, 3140, 3141, 3142, 3143, 3144, 3145, 3180, SF-1, SF-2, SFF-1, SFF-2.**

Ask for data sheets, prices, and samples of these FLEXLEAD wire constructions

FLEXLEAD Coaxial Cables. Markel manufactures a complete line of both standard and special RG/U coaxial cables. In accordance with specifications, types are available with silver-plated copper, plated or unplated copper-covered steel, or bare copper center conductor; one or two braided shields; tape-wrapped Teflon shield guards; and outer jacketing of impregnated fiberglass braid or Teflon (extruded or tape-wrapped). For complete data, ask for a FLEXLEAD Coaxial Cable Specifications folder.

FLEXLEAD Special Constructions. Because wiring problems cannot always be solved with standard materials, Markel's capacity for engineering high temperature wire and cable constructions to meet particular needs has grown steadily with the demand. We can combine insulations—Teflon, silicone rubber, fiberglass, nylon-shielding, fillers, liners, and jacket materials—with single, twisted pair or multiple conductors—to provide a special cable construction for any temperature range from —90° to 260°C.

FLEXLEAD Fused Twisted Pair. This unique Teflon-insulated twisted pair construction finds wide application in computers and similar circuitry. The fusing, which will withstand predetermined pulls to separate the individual wires, keeps the wires evenly twisted for easier assembly and uniform capacitance and inductance. Ask for a test sample and prices.

FLEXLEAD MB Bondable Teflon. The Markel MB process can be factory-applied to any of the FLEXLEAD Teflon wires, extruded or tape-wrapped, and renders the surface bondable with commonly used elastomeric and epoxy-base potting and encapsulating compounds. Without affecting the color or electrical properties of the insulation, the MB treatment provides a bond with up to 150 psi pull-out strength, and a surface that is receptive to marking and printing.

"NAFOAM"

LOW CAPACITY INSTRUMENTATION WIRE AND CABLE PRIMARY INSULATIONS OVER STRANDED CONDUCTORS

National now offers low-capacitance instrumentation leads using NAFOAM insulation.

This foamed polyethylene insulation is extruded in any wall thickness from .015″ to .250″.

The foaming is produced by an agent which liberates nitrogen gas into the melted plastic during the hot extrusion process. The expansion of the gas forms tiny bubbles throughout the material.

These bubbles expand, then are trapped as the plastic cools on the conductor.

The finished material is a firm closed cell foam of polyethylene. Approximately ½ the volume of the foam is .002″ diam. bubbles of the nitrogen gas.

Since the normal expansion is about 100% by volume, the resulting dielectric has extremely low capacitance. (See table).

TYPICAL CHARACTERISTICS

Property	NAFOAM	TEFLON®	Regular Polyethylene
Dielectric Constant	1.5	2.0	2.26
Dissipation Factor	.0004	.003	.0003
Breakdown Voltage (volts/mil)	200	600	500
Temperature Range degrees F	−80 +160	−85 +400	−80 +160
Density (gm/cc)	47	2.2	.93
Colors:	Natural & Brown	any	any

"NAFOIL"

SHIELDED WIRES AND CABLES

NAFOIL SHIELDING:

The ideal choice for low-level signal circuit and general instrumentation work.

WHAT IT IS:

NAFOIL is a laminated tape: { One tape of clear Mylar .001″ thick. One tape of aluminum foil, .00035″ thick.

The two tapes are bonded by an adhesive to form a .0015″ thick tape of high strength and excellent conductivity. Will not damage conductors. Far superior to unsupported metal foils.

HOW IT'S USED:

A — An extra conductor (bare) called the "drain" is included on the outside of the wire bundle or cable.
B — NAFOIL tape is spiral wrapped around the wire bundle and drain, with the aluminum side inward.
C — The aluminum foil contacts the "drain" at every turn, preventing inductance build-up.
D — The foil is overlapped upon itself, so the wire bundle is covered 100% (Unlike regular braided shields).

WHY IT'S BETTER:

1 — Costs less than braided shields.
2 — Shield covers 100% of bundle. Not 85-90% as in braided shields
3 — Smaller. NAFOIL adds .006″ to OD. (0.25″ for regular braid).
4 — Drain wire used to make shield connection. Fast! Simple!
5 — Flexible. Negligible stiffening of bundle.
6 — Capacitance through the shield is less. Lowest cross-talk.
7 — Mylar adds to insulation of outer jacket.

PROOF OF PERFORMANCE:

The following data taken on a 22 ga. twisted shielded pair (22 ga. drain).

PROPERTY	NAFOIL Shield	90% Braid Shield
Capacitance through the shielding. mmfd.	< .008 mmfd/ft.	< .017 mmfd/ft.
Resistance of shield	16 ohm/M ft.	6.0 ohm/M ft.
Contact resistance of foil to drain	.05 ohm/6″	——

MULTIPLE CONDUCTOR CONTROL CABLES

IN STOCK
MIL-SPEC

National Wire & Cable Corporation manufactures a complete line of multiple conductor control cables. Conductors are of tinned copper strand with 1/64" vinyl primary insulation for use up to 105°C per MIL-W-16878D Type C†. Insulated for **1000** volts working voltage. Conductors are color coded using 10 standard basic colors, plus spiral tracers on white per MIL-STD. 122.

All conductors are planetary cabled and contra-helically laid with a Mylar tape serve over the cable bundle. The overall jacket is a 105° C black polyvinyl-chloride thermoplastic, meeting specification MIL-I-631 Class F, or may be Neoprene to MIL-R-6855 Class 2 Grade 60 specification. (Neoprene jackets at added cost.)*

National Multiple Conductor SHIELDED CABLES are to the same specifications as above with addition of tinned copper braided shield over cable complex with 85-90% coverage to MIL-C-7078A. STANDARD PUT-UPS: 500 ft. and 1000 ft. No-deposit reels.

*(Standard put-up for Neoprene jacketed cable is 250 ft.)

†Insulated Conductors are also UL approved under UL type 1007 AWM, and are CSA approved as type TR 64.

TECHNICAL DATA (all cables)

Insulation Breakdown Voltage:	Greater than 8000 volts AC RMS, 60 cps.
Capacitance:	Nominal capacitance from a wire to all else in the cable ranges from 40 to 65 mmfd per ft., @ 1000 cps; dependent on gauge and position.
Insulation Leakage Res.:	200. megohms/1000 ft. min. at 500 VDC from any conductor to all else in cable.
Sheath Leakage Res.:	10. megohms/1000 ft. min. at 500 VDC from overall shield through sheath to outside world.
Usable Temp. Range:	Suitable for continuous use from +105°C to −55°C.
Cold Bending Capability:	All cables are suitable for flexing to a circle diam. of approx. 6 cable diameters from +105°C to −20°C; Recommended flex diameter should be greater than 20 cable diam. for flexing at −40°C., or for continuous flexing service to −55°C, specify our neoprene sheath, in lieu of plastic sheath.

MULTI-CONDUCTOR STOCK CABLES

Conductor sizes 22, 20, 18, 16, 14 & 12 gauge. 22 AWG is 7 strand. All others 19 strand.

NATIONAL WIRE & CABLE CORPORATION

136 SAN FERNANDO RD., LOS ANGELES, CALIF. 90031 • PHONE (213) 225-5611 • TWX: 910-321-4155 • FED. STOCK CODE H4-04569

MULTIPLE PAIR SIGNAL & CONTROL CABLES

IN STOCK
MIL-SPEC

Identical to National's NW-Series Cables except offered as twisted pairs.

National Wire & Cable Corporation manufactures a complete line of multiple pair control cables. Conductors are of tinned copper strand with 1/64" vinyl primary insulation for use up to 105° C per MIL-W-16878D Type C. Insulated for **1000** volts working voltage. Conductors are color coded using 10 standard basic colors, plus spiral tracers on white per table below.

All pairs are planetary cabled and contra-helically laid with a Mylar tape serve over the cable bundle. The overall jacket is a 105°C black vinyl plastic per MIL-I-631; or may be Neoprene to MIL-R-6855 Class 2 Grade 60 specification. (Neoprene at added cost).

SHIELDED CABLES

National Multiple Conductor SHIELDED CABLES are to the same specifications as above with addition of tinned copper braided shield over cable complex with 85-90% coverage to MIL-C-7078A. STANDARD PUT-UPS: 500 ft. and 1000 ft. No-deposit reels.

TECHNICAL DATA (all cables)

Insulation Breakdown Voltage:	Greater than 8,000 volts AC RMS, 60 cps.
Capacitance:	Nominal capacitance wire to wire for a pair ranges from 27. to 40. mmfd/ft. Capacitance from both wires tied together measured to all else in common ranges from 35. to 60. mmfd/ft. dependent on gauge and position. Overall shield has negligible effect on W-W capacitance.
Insulation Leakage Res.:	200. megohms/1000 ft. min. at 500 VDC from any conductor to all else in cable.
Sheath Leakage Res.:	10. megohms/1000 ft. min. at 500 VDC from overall shield through sheath to outside world.
Usable Temp. Range:	Suitable for continuous use from +105°C to −55°C.
Cold Bending Capability:	All cables are suitable for flexing to a circle diam. of approx. 6 cable diameters from +105°C to −20°C; Recommended flex diameter should be greater than 20 cable diam. for flexing at −40°C., or for continuous flexing service to −55°C, specify our neoprene sheath, in lieu of plastic sheath.

MINIATURE SIGNAL & CONTROL CABLES

IN STOCK
U.L. APPROVED COMPUTER GRADE

National Wire & Cable Corp. manufactures a complete line of MINIATURE low voltage signal and control cable. Available as cabled pairs or cabled singles, with optional overall shield. Conductors are stranded tinned copper with .010" wall of vinyl primary insulation for use up to 105°C. per MIL-W-16878 Type B. Insulated for **600 volts** working voltage. (Also meets U.L. AWM Type 1061; 300 volt, 80°C.) All are coded using 10 standard colors plus stripes on white per MIL-STD-681.

All conductors are planetary cabled and contra-helically laid for optimum flexibility, with a Mylar tape barrier under shields. Shielded cables have a tinned copper braid overall, of 85–90% coverage per MIL-C-7078; and braid angles below 40° for easy pushback.

The outer jacket is black abrasion-resistant 105°C. vinyl meeting MIL-I-631 Type F. All materials are self-extinguishing and fungus resistant. All items are U.L. APPROVED STYLE 2343 COMPUTER CABLE; rated 300 volt, 80°C. (Higher temp. ratings apply for any non-U.L. service.)

Standard Putups: 500 & 1000 ft. No-deposit reels.

*Denotes U.L. Style 2344.

TECHNICAL DATA (all cables)

Insulation Breakdown Voltage:	Greater than 5000 volts AC RMS, 60 cps.
Capacitance:	Nominal capacitance from a wire to all else in a cable ranges from 45. to 70. pf/ft at 1. kc, depending on gauge and position.
Insulation Leakage:	200. megohms/1000 ft. min. @ 500. VDC from any conductor to all else in cable.
Sheath Leakage:	10. megohms/1000 ft. min. @ 500 VDC from shield or conductor group through sheath to ground.
Temperature Range:	Suitable for continuous use from −40°C. to +105°C. (U.L. Service limited to +80°C.)
Bending Characteristics:	All cables are suitable for flexing to a circle diameter of 6. cable diameters from +105°C. to −20°C. Recommended flex diameter should be greater than 20 cable diameters for flexing at −40°C.

MULTI-CONDUCTOR STOCK CABLES SINGLES

Cond: 22, 24 are 7 strand; 20 AWG is 19 strand

NATIONAL WIRE & CABLE CORPORATION

136 SAN FERNANDO RD., LOS ANGELES, CALIF. 90031 · PHONE (213) 225-5611 · TWX: 910-321-4155 · FED. STOCK CODE H4-04569

MILITARY & U.L. GRADE RFI SHIELDED PAIR CABLES

MEETS U.L. STYLE 2343 OR 2344 FOR COMPUTER USE.

SHIELDED PAIR CABLES

SIGNAL & CONTROL CABLES

National Wire & Cable Corp., manufactures a complete line of flexible multi-pair cables in which each pair is individually twisted, shielded and plastic-jacketed.

Provides a minimum of crosstalk between signal channels, plus complete isolation between shields. Excellent for analog signals. All jackets moisture-proof. Suitable for use in duct, conduit, aerial or burial installations.

Conductors are stranded tinned copper with .010″ vinyl primary insulation, plus .004″ nylon insulation over the vinyl per MIL-W-16878 Type B. Insulation for 600 volts working rating at 105°C. Color coded: White and black (all conductors are 19 strand.)

Shielding is tinned copper braid with 90% minimum coverage per MIL-C-7078, and shield angle below 40 degrees for easy push-back.

Jackets over shields are extruded 105°C white polyvinyl chloride plastic per MIL-I-631, Class F; Color coded with stripes per MIL-STD-681, starting with 9.

All pairs are planetary cabled and contra-helically laid with a mylar tape serve over the cable bundle. The overall sheath is abrasion-resistant black 105°C vinyl thermoplastic per MIL-I-631, Class F.

Optional overall shielding of cabled bundle is 90% minimum coverage of tinned copper braid applied per MIL-C-7078 over the tape serve under sheath.

STANDARD PUT-UPS: 500 & 1000 FT. ON NO-DEPOSIT REELS.

TECHNICAL DATA

Insulation Breakdown Voltage: Greater than 5000 volts RMS, 60 hz.

Capacitance: (mmfd/ft.)

AWG	Wire-Wire	Wire-Shield
22	37	64
20	44	77
16	55	96

Insulation Leakage Resistance: 200 Megohms/1000 ft. min. at 500 VDC from any conductor to all else in cable.

Sheath Leakage Resistance: 10 Megohms/1000 ft. min. at 500 VDC from overall shield through sheath to saline bath at 25°C.

Usable Temperature Range: Suitable for continuous use from +105°C to −55°C when stationary. Flexing service: +105°C to −25°C.

Cold Bending Capability: All cables are suitable for bending to a circle diameter of 8 cable diameters from +105°C to −20°C. Recommended flex diameter should be greater than 20 cable diameters at −40°C.

Crosstalk: Common-mode, adjacent pairs: Worst case, −50 db @ 1 mhz; falling to −100 db below 100 khz. (Ref. MIL-C-23437 for test method.) For 100 ft. test length.

MIL-SPEC FOR ROUGH USAGE & EXTREME ENVIRONMENTS

TEFLON®-INSULATED CABLES

SIGNAL & CONTROL CABLES

National Wire & Cable Corp., manfactures a standard line of TEFLON®-INSULATED multi-conductor signal and control cables designed for extreme environments and rough usage.

Construction is widely used in aerospace and industrial applications requiring a near-ultimate in cable physical and electrical performance plus high reliability.

Conductors are stranded silver-plated copper, insulated with .010″ of extruded TFE Teflon®; rated at 600 volts working from −65°C to +260°C per MIL-W-16878 Type E. Conductors are color coded using 10 standard colors plus spiral stripes on white per MIL-STD-681. (All conductors are 19 strand.)

All conductors are planetary cabled and contro-helically laid for optimum flexibility, with a Mylar tape wrap over the cabled bundle. The outer sheath is abrasion-resistant black Neoprene per MIL-S-6855, Class 2, Grade 60.

Optional overall shield is a 90% coverage tinned copper braid over the tape wrap per MIL-C-7078.

STANDARD PUT-UPS: 250 FT. LENGTHS ON NO-DEPOSIT REELS.

® Trademark, E. I. Dupont Co.

TECHNICAL DATA

Insulation Breakdown Voltage: Greater than 4000 volts RMS, 60 hz.

Capacitance: Nominal capacitance from a wire to all else in cable ranges from 25 to 45 mmfd/ft. dependent on gauge and position in cable bundle.

Insulation Leakage Resistance: 5000 Megohms per 1000 ft.; minimum from any wire to all else in cable.

Sheath Leakage Resistance: 20 Megohms/ft. minimum; from shield through sheath to saline bath after 24 hr. at 25°C.

Usable Temperature Range: Suitable for continuous use from −55°C to +75°C in flexing service or stored.

Cold Bending Capability: All cables are suitable for bending to a circle diameter as small as 4 times their diameter from −55°C to +75°C. Continuous flexing to less than 6 times diameter is not recommended below −40°C.

General Performance: All materials are self-extinguishing after exposure to flame. Non-nutrient to fungus. Highly resistant to ozone, oils, mild acids and bases, high humidity.

COMPLETE WIRE MILL & CABLE MILL FACILITIES TO MEET YOUR NEEDS

CUSTOM-MADE CABLE TO YOUR OWN SPECIFICATIONS....

IS AVAILABLE PROMPTLY — AND AT LOWER COST THAN YOU MAY SUPPOSE . . .

BECAUSE NATIONAL HAS:

1- **The organization & experience** to handle short-runs or rush schedules with consistent quality.

2- **All types of mill machinery** for fabricating cable and all intermediate operations.

3- **An enormous wire inventory** to draw from for material for your cable. (over 100 million feet in stock)

4- **Technical consultants** to aid you in properly specifying your cable needs and construction.

Mr. DESIGNER: May we suggest:

A. **Request a copy of our complete Master Catalog. Write to us on your company letterhead, or phone us directly in Los Angeles with your request**
Then . . .

B. Check our catalog section and the instrumentation cable section for any of our standard stock cables which may meet your needs.

C. Review our cable designer's check list in the "Technical Information" section of the Master Catalog. Note any topics on which you may need information or recommendations.

D. Call National Wire & Cable Corp. (213 - 225-5611) and discuss your needs with our Technical Consultants. They speak your language and will have the answers you need.

E. Our Consultants will assist you in design, obtain cost and delivery information, and provide formal quotations and drawings, and assist with sales and procurement liaison.

F. Send us your prints for your custom cables for review and quotation. Where necessary, National Wire and Cable will provide engineering at no cost to fit your needs.

TRY OUR SERVICE, AND SEE!

NATIONAL WIRE & CABLE CORPORATION IS UNIQUE AMONG THE LEADING MANUFACTURERS OF CONTROL AND INSTRUMENTATION CABLE FOR THE ELECTRONIC AND AEROSPACE INDUSTRY. UNIQUE, DUE TO OUR HUGE WIRE INVENTORY — OVER 100 MILLION FEET IN STOCK — WHICH ALLOWS VERY RAPID DELIVERY OF CABLE, AND EXCELLENT SERVICE TO OUR WIRE CUSTOMERS.

COMPLETE FACILITIES FOR FABRICATING ALL CONSTRUCTIONS.

COPPER CONDUCTOR FABRICATION
CONDUCTOR INSULATION EXTRUSION
INSULATION CODING & STRIPING
ELECTRICAL SHIELDING

TWISTING & SUBCABLE FABRICATION
PLANETARY CABLE FABRICATION
CABLE SHEATH EXTRUSION
CABLE ASSEMBLY FABRICATION

DIGITAL DATA TRANSMISSION CABLES

Manufactured by our affiliate, Dynatronic Cable Engineering Corp.

THE D-200 SERIES CABLES ARE MULTIPLE-PAIR FLEXIBLE CABLES DESIGNED FOR TRANSMISSION OF DIGITAL PULSE SIGNALS BETWEEN A COMPUTER AND ITS PERIPHERAL EQUIPMENT.

These cables are specifically designed for use with TTL, ECL, DTL or RTL logic systems. They feature signal pairs with a uniform high surge impedance, low delay, low capacitance and attenuation.

The cables may be directly driven by I.C.'s in either balanced or single-ended systems. The compact cable dimensions allow convenient connector installation and tight installation bends.

All cables have an overall shield and black vinyl outer sheath.

The D-200 series cables are designed to be used in either balanced or single-ended systems without the need for individual shields on each pair. By omitting the shields, the surge impedance is kept high yet the cable size is small. The cable geometry, pair and layer lay lengths, rotation directions, and the insulation materials and sizes have been carefully designed for low cross-talk and exact surge impedance.

All cable lengths are factory-tested for surge impedance accuracy using time-domain reflectometry techniques; and are certified to meet the impedance tolerances specified.

STANDARD DATA CABLE CONSTRUCTIONS

Min. Bend Radius	6 x cable diameter	

* One conductor of each pair tied to common. ** Both driven, one inverted.

DESIGN FEATURES OF THE D-200 SERIES DIGITAL DATA CABLE

Unlike conventional flexible cable construction, the primary features offered by the D-200 series data cable are the high and accurately-controlled characteristic impedance of every pair, regardless of its position in the cable;† and special geometry chosen to reduce crosstalk.†

ADVANTAGES:

1—Less crosstalk and noise from mismatched loads, due to proper matching.

2—Uniform light loading on drivers allows direct I.C. drive, accurate prediction of current demands from power supply, and driver power dissipation.

3—Proper load match reduces re-reflection and inversion noise where driver end is not matched to line (typical of TTL).

4—Special geometry and pair construction provides exceptionally close capacitance balance between pair wires, reducing differential crosstalk.†

USAGE:

We recommend use of **balanced drive** and **differential-input line receivers** for lowest crosstalk and best pulse-reproduction, utilizing the 110 ohm balanced impedance of the pairs. With such a system, TTL and MECL speeds have been used on D-200 cable at 1 mc data rates over 1000 ft.

Where the system is single-ended drive and receive, all pairs exhibit the 78 ohm impedance. Since these line receivers cannot discriminate between noise and the desired signal, crosstalk limits the cable distance over which transmission is reliable. Typical runs for DTL having 50 ns risetimes are 200 ft. Where risetimes can be slowed to longer than 100 ns, run lengths are practical to 500 ft. Without differential line reception, runs over 500 ft. are not recommended for D-200 cable due to external noise aspects. The **D-210** series cable is recommended for high-noise or long-run application (utilizing individual shields).

† Patent pending

Although use of balanced drive and differential line reception will avoid most noise problems, there are some installations where the expected external noise is unknown but assumed to be very great. Here, the use of data cables having individually-shielded pairs may be considered as conservative engineering practice. The assurance of a lower received noise may justify the increased size, cost and risetime.

For these high-noise long-run applications, Dynatronic Cable Engineering Corp. has developed the D-210 series data cables. Electrical performance is essentially the same as the D-200 series cables, which use only an overall shield. An overall tinned-copper shield braid may be specified on either series by the suffix -RF on the part number. Standard D-200 shield is aluminum-mylar foil.

STANDARD DATA CABLE CONSTRUCTIONS

D-210 Series Cables			Individually-shielded Data Pairs			
Part No.	No. of Pairs	Z_0	Delay ns/ft.	Cond. AWG	Cable Diam.	Sheath
D-210-12	12	110.	1.61	24	.980	PVC
D-210-15	15	110.	1.61	24	1.06	PVC
D-210-20	20	110.	1.61	24	1.20	PVC
D-210-30	30	110.	1.61	24	1.42	PVC
D-210-40	40	110.	1.61	24	1.69	PVC
D-210-48	48	110.	1.61	24	1.76	PVC

TECHNICAL DATA

Characteristic	Balanced**	Single-Ended*
Surge Impedance	110 ohms ±5%	63 ohms ±4%
Capacitance	14 pf/ft.	23.5 pf/ft.
Signal Delay	1.61 ns/ft.	1.61 ns/ft.
DC Resistance/100 ft.	5.6 ohms loop	2.8 ohms
Insulation Breakdown	6 KV min. DC	6 KV min. DC
Insulation Resistance	> 1000 megohms/M′	> 1000 megohms/M′
Temperature Range	−20°C up to +80°C	
Min. Bend Radius	9 x cable diameter	

** Both driven, one inverted. * One conductor of each pair tied to common.

CONNECTOR/CABLE ASSEMBLIES INTEGRAL-MOLDED

HIGHEST PROFESSIONAL QUALITY & APPEARANCE
DURABLE, RELIABLE, ECONOMICAL, READY-TO-USE.

Connectors Are Created Directly on Cable by Injection of Plastic Around Contacts, Cable & Hardware; Using Our Proprietary High-Production Techniques.

WIDELY USED IN:

- ELECTRO-MEDICAL EQUIPMENT
- INDUSTRIAL CONTROLS
- COMPUTER CABLING
- INSTRUMENTATION
- COMMUNICATIONS EQUIPMENT
- AUDIO & HI-FI EQUIPMENT

WE ARE A COMPLETE SOURCE:

MANUFACTURING: Since we manufacture all wire, cable, contacts, hardware, molding and tooling within our own facilities, we can ensure consistent quality and dependable delivery. Complete wire & cable mill plus injection-molding plant.

STANDARD ITEMS: We have many standard cables and molded connector styles; all available without tooling or setup expense.

ENGINEERING: Complete engineering and design services to assist you. Cables and molded connectors custom-designed to your requirements. Extra-flexible and low-capacitance construction are our specialty.

CALL OR WRITE FOR INFORMATION & PRICES

WE SPECIALIZE IN HI-SPEED INJECTION-MOLDING OF CONNECTORS DIRECTLY ONTO CABLES.

(Wire Shield, Flat Ribbon Shield, Corrugated Copper Tape Shield, Aluminum Sheath.)

SILICONE RUBBER INSULATED WIRE & CABLE
MIL-W-16878D types "F", "FF", "FFW"
MIL-W-8777B
Underwriters Laboratory type SF-1, SF-2, SFF-1, SFF-2
High temperature, high voltage hook-up wire
Motor lead wire

HOOK-UP & AIRCRAFT WIRE

MIL-W-1687D, MIL-W-7139A, MIL-W-7139B (Extruded Teflon*)

MIL-W-7139B

Manufactured to conform to Dept. of Defense requirements.
600 Volts Temperature Rating +200°C & +260°C.
Class 1—Silver Coated Copper Conductor for +200°C Operation.
Class 2—Nickel Coated Copper Conductor for +260°C Operation.
*DuPont Trade Mark

SILICONE WIRE & CABLE

EXTRUDED SILICONE RUBBER

Outstanding performance, under difficult operating conditions rapidly expand applications for these constructions.

ADVANTAGES

1. Electrical properties remain constant from −130°F to +500°F.
2. Remains flexible even after long exposure to temperatures from −130°F to +500°F.
3. Resists ozone and corona.
4. Can be soldered without melting or destroying insulation.
5. Non-Flammable.
6. High Dielectric strength (450 to 550 volts/mil)
7. High Insulation resistance (1000 to 20,000 megohms-/1000 ft.)
8. Low dissipation factor (.001-.02)
9. Low Dielectric Constant (2.98-3.6)
10. Low water absorption (1 to 2%)
11. High Tensile Strength (750 to 1500 PSI)
12. High Elongation (100-550%)

The most prominent silicone rubber insulated wires and cables are detailed by the following specifications:

MIL-W-8777B — IGNITION WIRE
MIL-W-16878D (F, FF, FFW) — APPLIANCE WIRE
MIL-C-3162A (SF-1, SF-2, SFF-1, SFF-2.)
MIL-C-8817 (ASG) — MOTOR LEAD WIRE

GLASS BRAID — SILICONE RUBBER — TINNED COPPER

MOTOR LEAD WIRE

(600 Volts Class "H" +200°C)

Lead wire failures can be practically eliminated with the use of silicone rubber insulations. In many instances the equipment can be baked with lead wire in place.

MIL-W-8777B (ASG)

Dated 1 August 1960—Superseding MIL-W-8778A—10 July 1956. Voltage Rating 600 Volts. Temperature Rating −55°C +150°C.
Construction Details:
(a) Conductor—Concentric stranded or rope—lay stranded silver copper conductors as required by specification. (b) Primary Insulation—Silicone Rubber. (c) Protective Cover—Fiberglas Braid impregnated with heat-resistant lacquer. (d) Outer Protective Coating—1. Polyester Jacket, impregnated with heat resistant lacquer. 2. Extruded FEP Jacket. (e) Print—Outer surface printed as required by specification.

Per Military Standards—
MS 25471 (ASG) Polyester Jacket Impregnated with High Temperature Finisher MS 27110 (USAF) Extruded Clear FEP Jacket.

HIGH TEMPERATURE — HIGH VOLTAGE HOOK-UP WIRE

Class "H" Insulation for −65°C to +200°C Max.
Silicone Rubber and extruded Teflon* 100 (FEP).

Description:
a. Conductor — Copper stranded, silver plated — 40 microinches min.
b. Primary Insulation — High strength silicone rubber.
c. Jacket — Teflon* (Perfluorocarbon resin 100) extruded.
For operation between −65°C and +175°C at 2000 Volts RMS (sea-level).

TYPES SF-1, SF-2, SFF-1, SFF-2
For appliances where high temperature wiring is mandatory.
*DuPONT TRADE MARK

MULTI-CONDUCTOR, UNSHIELDED, JACKETED CABLES

These cables can be supplied in various AWG sizes, insulation types, number of conductors and jacket types. Used for unbalanced intercom systems, low voltage control systems, public address systems, electronic computers, indoor and outdoor sound and signal systems.

MULTI-PAIR, UNSHIELDED, JACKETED CABLES

This cable type can be supplied in a variety of sizes, insulations and jackets to meet individual needs and requirements. For use in balanced intercom systems, annunciators, telephones, nurses call systems, control circuits, electronic computers, multiple speaker, signal and alarm systems. Pairs twisted with varied lays to eliminate crosstalk.

MULTI-CONDUCTOR, SHIELDED JACKETED CABLES

Cables of this type are used for indoor and outdoor public address and sound systems, installations in schools, hospitals, and institutions, recording studios, transmitters, paging and call systems, and wherever required to prevent interference pickup. Can be supplied in various AWG sizes, insulation types, braided, spiral wrapped or foil wrapped shields and PVC or Polyethylene jackets.

MULTI-PAIR, SHIELDED JACKETED CABLES

These cables are designed to provide maximum performance in eliminating interference and crosstalk in public address and sound systems, broadcast studios and indoor and outdoor telephone and intercom systems. Can be supplied in various AWG sizes, Insulations, shield types and jackets.

AIRCRAFT WIRE

MIL-W-5086A — Type 1

(Dated June 18, 1957 Superseding MIL-W-5086 — Nov. 30, 1950.)
600 Volts Temp. Rat. −55°C +105°C
Synkote insulated electrical aircraft wire manufactured to conform to Military Specification MIL-W-5086-A

1. Construction Details:
   (a) Concentric stranded tinned copper conductor
   (b) Synthetic resin insula. (105°C)
   (c) Extruded clear nylon jacket
2. This construction available with tinned copper shield and/or with extruded nylon jacket over shield. Identified as Type 1 or Type 2 per specification MIL-C-7078A.
3. Standard Color: White.
4. May be furnished in multiple conductor combinations—color coded as required.

MIL-W-5086A — Type 2

(Dated June 18, 1957 Superseding MIL-W-5086 — Nov. 30, 1950.)
600 Volts Temp. Rat. −55°C +105°C

1. Construction Details:
   (a) Concentric stranded or rope-lay stranded tinned copper conductors as required by specification
   (b) Synthetic resin insula. (105°C)
   (c) Glass braid — saturated.
   (d) Extruded clear nylon jacket sizes AN-22 thru AN-12; braided nylon, impregnated with nylon lacquer sizes AN-10 thru AN-4/0.
2. This construction available with tinned copper shield in all sizes. Also with extruded nylon jacket over shield in sizes AN-22 thru AN-12 per specification MIL-C-7078A — Type 1 or 2.
3. Standard Color: White.
4. May be furnished in multiple conductor combinations—color coded as required.

MIL-W-5086A — Type 3

(Dated June 18, 1957 Superseding MIL-W-5086 — Nov. 30, 1950.)
600 Volts Temp. Rat. −55°C +105°C

1. Construction Details:
   (a) Concentric stranded or rope-lay stranded tinned copper conductors as required by specification
   (b) Synthetic resin insula. (105°C)
   (c) Glass braid — saturated.
   (d) Secondary synthetic resin insulation.
   (e) Extruded clear nylon Jacket sizes AN-22 thru AN-12; braided nylon, impregnated with nylon lacquer sizes AN-10 thru AN-4/0.
2. This construction available with tinned copper shield in all sizes. Also with extruded nylon jacket over shield in sizes AN-22 thru AN-12 per specification MIL-C-7078A — Type 1 or 2.
3. Standard Color: White.
4. May be furnished in multiple conductor combinations—color coded as required.

PRECISION TUBE COAXITUBE

Semi-Rigid Coaxial Cable

To meet the demand for fast delivery of 50-ohm semi-rigid coaxial cables, Precision now stocks the most commonly used types, listed below, for immediate off-the-shelf shipment. Fifty-foot coils of these constructions can be shipped within two working days; cut straight lengths, to your specification, take only a little longer. All of these standard cables employ dielectric of solid polytetrafluoroethylene, with seamless copper or aluminum outer conductors. All exhibit nominal electrical characteristics as follows: $Z_0 = 50$ ohms; propagation velocity = 69.5%; and capacitance = 29.3 pf/ft.

In addition to these standard cables, Precision manufactures more than 40 special Coaxitube constructions with impedances ranging from 12 to 125 ohms, and outer diameters from .020 to .500 inches. Custom outer finishes, including plating on aluminum and plastic jacketing, are available to order. Precision's Pre-Fab Department can provide complete cable assemblies, coaxial delay lines, and other custom Coaxitube constructions to your exact specifications, including testing where required. Call or write for prompt attention and quotations.

Standard sizes in 50-foot coils for immediate delivery!

Part Number	O.D.	Outer Conductor Material & Finish	Safe Bend Radius
MA50056	.056 ± .002	Copper	.125
AA50085	.085 ± .001	Copper	.125
BA50085	.085 ± .001	Copper	.125
BC50085	.085 ± .001	Silvered Copper	.125
AA50141	.141 ± .001	Copper	.125
AC50141	.141 ± .001	Silvered Copper	.125
AD50141	.141 ± .001	Cadmium Plated Copper	.125
AE50141	.141 ± .001	Tinned Copper	.125
CA50215	.215 ± .003	Copper	.375
CH50215	.215 ± .003	Aluminum	.375
BA50250	.250 ± .002	Copper	.375
NA50325	.325 ± .005	Copper	.500
NH50325	.325 ± .005	Aluminum	.500

NOTES: (1) All dimensions are in inches. (2) Silverplating on outer conductor is Type II, Grade B, QQ-J-365, .0003 inch minimum thick. (3) Tinplating on outer conductor is Type I, MIL-T-10727, .001 to .00025 inch thick. (4) Cadmium plating on outer conductor is Class 2, Type I, QQ-P-416.

For breadboarding or prototype production, small quantities of Coaxitube Cable are available in these four Coax-i-kits, priced at $20 each, FOB destination, with next-day shipment. Select the kits which fit your needs, then call in your order.

Kit	Contents	Ship Via
A	One 10-foot coil each of MA50056, DA50085 and CA50141	1st Class Mail
B	Two 4-foot straight lengths each of CA50215 and NA50325	Parcel Post
C	One 10-foot coil each of BA50085 and AA50141	1st Class Mail
D	Two 4-foot straight lengths each of CH50215 and NH50325	Parcel Post

DA50085 and CA50141 are identical to BA50085 and AA50141, respectively, except for OD tolerance of ± .003 inches and a greater impedance tolerance.

COAXIAL CABLE

COMMERCIAL TYPES AND MIL TYPES

SAXTON CAN supply all types of RG/U Cable. This includes 50 ohm, 75 ohm and 93 ohm with solid polyethylene dielectric and foam polyethylene dielectric for general purpose, television and military application.

OPEN WIRE TRANSMISSION LINE

SAXTON SUPPLIES all types of low loss air dielectric open wire transmission line made with copperweld wire or solid copper wire. 300 ohm, 450 ohm, 475 ohm transmission lines are available with 7/16" spacing, 1" spacing, and 2" spacing using 12 gauge, 14 gauge, 16 gauge and 18 gauge conductors.

HIGH VOLTAGE WIRE

FLAME-RETARDANT RULAN INSULATION

SAXTON MANUFACTURES all types of High Voltage Wire including shielded and unshielded types with 18 and 20 gauge conductors.

MIL SPEC SPECIAL CABLES

MIL-C-3432 **QQ-W-343**
MIL-C-5756 **MIL-W-5086A**
MIL-C-915A **MIL-C-10392B**
MIL-C-17

SAXTON OFFERS all types of MIL Spec Special Cable in all gauges and number of conductors.

TEFLON MIL-W-16878D

SAXTON OFFERS a complete selection of Teflon Wire made to military specifications. This includes gauges from 14 through 30 with Type E, Type EE.

UNINSULATED COPPERWELD

40% COPPERWELD CONDUCTOR NON-STRETCH HARD-DRAWN

SAXTON HAS uninsulated copperweld wire in all gauges from No. 6 to No. 18.

Saxton PRODUCTS, INC.

215 N. ROUTE 303, CONGERS, N. Y. 10920

MULTI-CONDUCTOR JACKETED CABLE

SAXTON MANUFACTURES all types of multi-conductor cable. Both solid and stranded conductors are available in 18, 20 and 22 gauge. Stock items include cables of from two conductors through 12 conductors.

MULTI-CONDUCTOR SHIELDED JACKETED CABLE

SAXTON CAN supply 1, 2, 3, or 4 conductor cable with solid or stranded conductors from 16 gauge thru 24 gauge with either a spiral wrapped shield aluminum foil or a braided shield.

UNSHIELDED AUDIO CABLE

SAXTON OFFERS multi-conductor unshielded unjacketed Audio Cable with solid or stranded conductors from 16 gauge thru 22 gauge.

AUDIO CABLE

SAXTON MANUFACTURES all types of Audio Cable with solid conductors or stranded conductors running from 12 thru 22 gauge. The selection includes 2 conductor shielded, 3 conductor wherein 2 conductors are shielded and one is not and four conductor wherein two conductors are shielded and two are not.

MICROPHONE CABLE

SAXTON MANUFACTURES all types of low capacity microphone cable. Gauges run from 20 through 26 with 1 through 6 conductors. The choice of shields include braided, spiral wrap and aluminum foil.

INTERCOM CABLE

SAXTON PROVIDES all types of Intercom Cable from 1 pair through 51 pairs with 22 gauge solid or stranded conductors.

UNINSULATED TINNED COPPER

SAXTON SUPPLIES solid and stranded uninsulated tinned bare copper wire in all gauges from 12 through 20.

PLASTIC HOOK-UP WIRE

SAXTON MANUFACTURES all types of Plastic Hook-Up Wire with either solid or stranded conductors from 14 gauge to 22 gauge.

SHIELDED PLASTIC HOOK-UP WIRE

SAXTON MANUFACTURES all types of Shielded Plastic Hook-Up Wire with either solid or stranded conductors from 14 gauge to 22 gauge.

TEST LEAD WIRE

SAXTON PROVIDES all types of Test Lead Wire with 18 gauge and 20 gauge conductors in voltage breakdown ratings from 5,000 volts to 22,000 volts.

Times interconnection products solve a broad spectrum of transmission problems

Solid metal tube sheathed coaxial cable

ALUMIFOAM® ALUMISPLINE®

What ordinary flexible coaxial cable won't do . . . Times semiflexible will! Here are 7 reasons why: More isolation—at least 80 db more than ordinary coaxial cable. Uniformity average—VSWR 1.1 or less. Stability—10 times better. Lower loss—30% less. Pulse reflection—less than 1%. Less distortion.

Available in three standard versions:

ALUMIFOAM®—Foam polyethylene dielectric where pressurizing isn't practical.

ALUMISPLINE®—Air dielectric where pressurizing is practical. Superior because the dielectric is uniformly extruded directly on the center conductor, guaranteeing lowest attenuation, VSWR, and good nanosecond pulse response.

ALUMISOL®—Solid dielectric

All semiflexibles are available for high temperature applications.

Write or phone for technical data.

Coaxial cable

RG/U. Over 50 Teflon insulated—and over 125 polyethylene insulated—to MIL-C-17. Over 120 types available from stock. T-Line—Improved RG cable equivalents—specially designed, improved characteristic cable equivalent to RG cables.

Miniaturized low capacitance, low attenuation cables; shielded, low capacitance twisted pairs. Special: Custom engineered coaxial cable is a Times specialty.

Write or phone for technical data.

Multi-conductor cable

High and medium temperature cables with up to 198 conductors have been designed and manufactured by TIMES to over 9000 customer and military specifications.

Write or phone for technical data.

Cable assemblies

Times' custom engineering service is qualified to design cable assemblies for the most critical applications, using any combinations of wire and connector constructions. We can take over the complete systems capability from layout to complete construction of cable assembly, which often results in lower engineering, shipping and installation costs.

Write or phone for technical data.

New TIMATCH® connector with COILGRIP® CLAMP

- Ready for instant termination
- Re-usable
- Fits most metal tube sheathed coaxial cable
- Has the exclusive CoilGrip Cable Clamp

A major advance in the connector field that virtually makes all other connectors obsolete. Makes it a simple one-step operation to attach connector to semiflex cable without any further connector assembly. Unpack the connector and it's ready for instant use.

Write or phone for technical data.

Coaxial delay lines

Usually the most critical cable components of an interconnection system. Though VSWR, attenuation, or pulse distortion are important, the electrical length or time delay is the most significant factor. Times gives the most serious consideration to the error tolerances assigned to the delay lines, as tight tolerances can significantly affect costs. We are in an excellent position to guarantee precision quality because we use coaxial cable and connectors that we ourselves manufacture in the construction of these delay lines.

Write or phone for technical data.

Notes:

1. Standard Color—Natural, but any of 10 solid colors can be supplied.
2. Supplied in 100′ coils or spools. Specify if longer or shorter spools are required.
3. Industry standard tolerances apply to diameter and wall thickness unless otherwise specified.
4. Certificate of compliance to MIL-I-22129C furnished upon request.
5. Quotation for special services, such as bundable treatment or etching, furnished promptly upon request.

VINYL (PVC) TUBING NON-TOXIC CLEAR VINYL TUBING • GENERAL PURPOSE

Non-Toxic Flexible Clear Vinyl Tubing is chemical resistant, odorless, tasteless. Formulated with compounds that have been approved by the U. S. Food & Drug Administration. Used for food and beverage tubing, laboratory tubing and medical tubing.

General Purpose Clear Vinyl Tubing is tough, flexible, long-lasting. Used for water lines, refrigerating tubing, chemical and industrial applications.

VINYL (PVC) TUBING (Continued)

Our high temperature vinyl tubing is a high heat resistant vinyl sleeving, which is particularly applicable for electric motor insulation, transformer leads, and other applications where high dielectric strength with outstanding resistance to heat and oils are required.

Our low temperature vinyl tubing is specification vinyl insulation sleeving embodying outstanding characteristics: Low temperature flexibility, excellent flame resistance, complete fungus and corrosion resistance. Composed of the new colorless transparent materials.

Our Extra High Temperature Vinyl Tubing was developed especially for electrical applications which require tubing flexibility, cut-through resistance and dielectric strength after prolonged immersion in oil, varnish or asphaltic pitch. In some instances of extreme use +105°C should be considered as operating maximum.

Our UL-105° Sleeving is a high heat resistant vinyl material which is most suitable for electric motor insulation, transformer leads or other applications where high dielectric strength with outstanding resistance to heat and oils is required. It incorporates excellent flame resistance.

	LOW TEMP. MIL-I-7444 +80°C [+176°F] −65°C [− 85°F]		HIGH TEMPERATURE MIL-I-631 +105°C [+221°F] −20°C [−4°F]			EXTRA HIGH TEMP. 125°C +125°C [+257°F] −40°C [−40°F]		U.L. 105°C +105°C [+221°F] −20°C [−4°F]

Nylon Cable Clamps are stronger than most other cable clamp material. They resist acids better and have a higher operating temperature, +135°C (+275°F). Basically conforms to MIL-P-17091A* and amendment 2, MIL-P-17091B*, MIL-M-20693A type 1*, NAS-1397, MS-39014*, MIL-P-20693.

*Conforms to dimensional requirements and materials specifications.

Polypropylene Clamps are stronger and stand higher temperatures than Ethocel and at a lower price.

Ethocel clamps have satisfied unlimited fastening problems throughout the electrical/electronic industry. It is light weight, yet very durable with excellent shock resisting properties in a temperature range from 185°F to −40°F.

USED IN:
Television and Radio
Business Machines
Industrial Machines
Electrical and Electronics
Aircraft
Home Appliances
Vending Machines

USED FOR:
Durability
Electrical Properties
Strength
Corrosion Resistance
Economy
Moisture Resistance
Abrasion Resistance
Resilience
Lightness of Weight
Single Wires
Group Wires
Pipe
Tubing

Transcon MANUFACTURING CO. BOX 20825 • DALLAS, TEXAS 75220 • (214) 357-8301

PLASTIC COMPONENT CLIPS

TRANSCON Plastic Component Clips are a convenient and economical means for fastening a wide variety of electrical and electronic components, accessories and parts. They are designed for fast, easy insertion, hold firmly and yet are easily removed. Typical applications are capacitors, resistors, lamps, batteries and fuses.

The clips are made of strong, rigid vinyl with insulating properties having high di-electric strength.

The floor of the clip is punched with one or two holes for screws or other fastening devices.

STRAIN RELIEF BUSHINGS

These bushings will cut your production cost because there is no need to knot or tie your cords to avoid strain on connections! They are quickly and easily installed with specially designed pincers or even with ordinary pliers.

Once installed they lock the cords to the chassis panel in a vice-like grip and are locked there until deliberately removed for servicing or trouble shooting.

TRANSCON Bushings on an appliance are a symbol of highest quality.

SPECIAL PINCERS FOR SPEEDIER INSTALLATION ARE AVAILABLE.

MicroCoax

Close-Tolerance Miniature Solid-Jacketed Coaxial Cables

Uses of close-tolerance MicroCoax cables include:

- Microwave transmission and delay lines
- Totally shielded connections (mixers, klystrons, stripline)
- High-speed computer leads
- Audio crosstalk suppression
- Low-noise amplifier isolation

Advantages:

- Low loss
- Essentially total RF shielding
- Easily soldered, stripped and connected
- Close tolerance, resulting in a high degree of uniformity and reliability, both mechanically and electrically
- Comprehensive mechanical and electrical test data available

NOTES: SPCW = Silver Plated Copperweld Wire, SPC = Silver Plated Copper Wire, C = Copper Wire, T = Tophet(1) C Wire, BeCu = Beryllium Copper Wire, 304SS = Stainless Steel, Type 304, TFE = Teflon TFE Resin, FEP = Teflon(2) FEP Resin, IP = Irradiated Polyethylene. (1) = Trade Name W. B. Driver, (2) = Trade Name E. I. Du Pont.

CONDUCTOR MATERIALS

Alloys or Pure Aluminum, Copper, Beryllium Copper, Iron, Nickel, Gold, Silver, Columbium (Niobium), Stainless Steel.

DIELECTRICS

ORGANICS: Teflon (TFE and FEP), KEL-F, PVC, RTV, Polystyrene, Polyethylene.

INORGANICS: Titanite, Alumina, Magnesium Oxide, Beryllium Oxide.

CABLE ASSEMBLIES

Fabricated from any of the standard MicroCoax cables, these assemblies are fully tested for VSWR and attenuation characteristics. A large stock of connectors assures the engineer rapid delivery of either straight or formed units. Comprehensive VSWR and attenuation test data is also available on request.

CUSTOM DELAY LINES

The fabrication of any of the MicroCoax cables listed in the above table into delay elements is one of our specialties. Obtaining the best combination of attenuation, size, shape, cost and weight can be best accomplished by discussing your delay requirements with our engineering staff.

STANDARD DELAY LINES

Stock delivery of delay elements is available for prototype or production requirements. Cable sizes include UT-250, UT-141-A, UT-85, UT-34 and UT-20. Delay values of 5, 10, 25, 50 and 100 nanoseconds allow the cascading of these elements to obtain specific delay and attenuation characteristics.

METHODS DESIGNED FOR BETTER QUALITY AND BETTER SERVICE

An important feature in maintaining the quality of our products is our ability to design and construct the tools necessary to do the job. We guarantee continuous performance of equipment & continuity of production.

The exacting specifications of Whitmor's space-age customers require a stringent quality assurance program. Our Q.C. meets Mil-Q-9858 & Mil-I-45208 with modifications required by customers. The same quality consciousness is applied to commercial work. We guarantee trouble free cable and wire!

Whitmor has what it takes to build cables for tough jobs!

20,000 square feet housing modern, high speed equipment makes it possible to fill orders on a 24 hour basis, if required.

WHITMOR WIRE AND CABLE CORPORATION

Manufacturers of custom, multiple conductor, Mil-Spec and U.L. approved cables.

*Designate jacketing desired as follows: V=vinyl X=Dur-X-thane P=polyethylene N=neoprene · Mil-S-6855 · Class 2 · Grade 60
EXAMPLE: W-1827P=Cable w/27 conductors, 18 gauge wire, w/polyethylene jacketing. **Add "S" to PART NO. for Shielded cable.
Other constructions available on request using 1/32" PVC insulation (3000 V, Military Type D); (600 V, Style 1015 U.L. Commercial)

TECHNICAL DATA

Whitmor Wire and Cable Corporation manufactures a complete line of multiple conductor control cables. All conductors are Type C per MIL-W-16878, insulated for 1000 V and 105° C. Conductors are color coded per MIL-STD 681. All conductors are planetary cabled and contra-helically laid with Mylar tape over the cable bundle.

® Dur-X-thane is Whitmor's Registered T.M. for extruded Polyurethane.

SHIELDED CABLES: Same specifications as above with additions of tinned copper braided shield over cable complex with 85%-95% coverage to MIL-C-7078A, cables shipped on non-returnable reels.

CABLED WITH OTHER WIRES

INDIVIDUAL WIRES

INSULATED, COLOR CODED, LETTERED AND IDENTIFIED.

Get your copy today!

1970 edition

World's most useful source of standard electronic products

1791 PAGES

RAPID REFERENCE TO OFF-THE-SHELF PRODUCTS AVAILABLE FROM DISTRIBUTORS

190,000 Items	**35 Product Sections**	**Descriptions Specifications Prices**	**13,000 Illustrations**	**250 Manufacturers**

12 WAYS

the new 1970 MASTER helps engineers and purchasing agents

1. Saves design time — the product you are looking for is illustrated and completely described.
2. Saves "shopping" time — all similar products are cataloged in a particular product section; it's simple to make a rapid decision.
3. Short-cuts delivery time — products shown in The MASTER are available from local distributors — just a phone call away.
4. Speeds inter-company communications — wide distribution of The MASTER at your company means other engineers, purchasing agents and buyers have a copy — thus you have a common frame of reference.
5. Saves buying time — descriptions, specifications so complete, you can purchase directly from information in The MASTER.
6. Cuts production cost — big illustrations, detailed specs, wide variety help you locate standard items that meet your requirements. Eliminates need to order a custom item.
7. Aids in selecting right product — comparison of specs, features, prices of several makes of similar-type products is simplified.
8. Keeps production lines moving — you can get that much needed product that's holding up production from your local distributor's stock.
9. Saves prototype and development time — helps you locate a standard product available for off-the-shelf delivery from a local distributor.
10. Locates many items not contained in smaller catalogs because it is the world's biggest electronic catalog of standard items.
11. Makes it easy for you to find the product you want immediately — 35 product sections and complete index make it also the easiest to use.
12. Saves time in writing specifications — information is so complete, so detailed.

Write — call — rush to your local electronic distributor — see list on following pages

electronic engineers master

MANUFACTURERS AND SALES OFFICE DIRECTORY INCLUDING TRADE NAMES

An alphabetical listing of more than 6,000 manufacturers supplying electronic equipment, instrumentation, components, materials and fabrication services. Included are addresses, telephone numbers and key sales executives. Local Sales Offices are shown for those manufacturers who have product information in the Catalog Section (white pages).

Trade Names (in italics), with descriptions of the products and names of their manufacturers, are intermixed alphabetically.

Federal Supply Code (FSC) numbers follow the names of those manufacturers who are currently supplying electronic equipment to the Federal Government.

Bold Face listings indicate manufacturers who have information in the Catalog Section (white pages). Their page numbers are included.

eem — Electronic Engineers Master, containing the catalogs of 844 manufacturers, is the only annual containing completely **verified** listings of sales offices and/or sales representatives. Sales offices are listed by state and city under each of the 844 manufacturers. Look for the sales office nearest you. Be sure to ask the sales office if there is a distributor of electronic parts nearby who handles the line in which you are interested.

Aerodyne Controls manufactures a complete line of acceleration, inertia, impact, tilt and motion switches. Tilt switches are high "g", non-mercurial, omnidirectional devices. Motion switches include intruder detection units. Aerodynes' low cost switches are available in unidirectional bidirectional, planar, hemispherical and spherical patterns. They range from fractions of a "g" to many thousands of "g"s.

Allen Avionics manufactures passive delay lines and filters that are used in Broadcast and television, Data transmission, Navigation and guidance, Radar, Satellite and space communications, Telemetry, Telephone and telegraph and Vehicular communications. We are unique in our field in that we build lumped delay lines having time delay to rise time ratios of up to 300/1. See section 2350 for information.

American Radar Flanges have been used in every major system over the last 20 years. While attaining this performance record, we have amassed the largest collection of flange tooling in the world. No order is too large or too small and no requirement is too difficult.

In addition to UG, WR, RE, CMR and CPR flanges we manufacture and almost infinite variety of specials in all types of material.

ATC Porcelain Capacitors increase power output by typically 1. dB, as much as 3. dB, because of their extremely low series resistance, especially when used for base-emitter tuning in high frequency or high power amplifiers. They extend the bandwidth of amplifiers and varactor-tuned circuits because of their low inductance and high Q.
ATC Phased Array Capacitors operate at up to 1000. volts peak RF with such negligible loss that system efficiency is significantly increased, the DC current necessary decreased (reducing the heat generated), and system MTBF increased compared to that possible with common NPO or K1200 ceramic types. This also allows the use of less expensive transistors. Both ATC types reduce the number of stages necessary to attain a given power output by increasing the available gain per stage. They provide the lowest Insertion Loss and widest frequency range of operation available.

Alois Zettler, a Swiss company, is one of the largest relay and switch manufacturers in Europe. American Zettler, a wholly owned subsidiary, follows the traditional Swiss observance of quality and precision. Assembly and checkout facilities in the United States are staffed by highly skilled and experienced circuit analysts who are on call to assist you in specifying any relay or switch application. A complete stock of products assures you of immediate, off-the-shelf delivery. Our engineers will be glad to provide you with free samples of American Zettler relays and switches and discuss your problems at no cost or obligation. Simply call or write one of the Sales-Engineering Representatives listed, or contact our headquarters in Costa Mesa, California.

Monolithic and hybrid IC operational amplifiers and electronic function circuits: Discrete operational amplifiers and function modules, including chopper-stabilized, parametric (0.01 picoampere bias), fast-settling (1 us and less to 0.01%), low drift chopperless. FET types. A/D and D/A converters, analog multipliers, dividers, log and antilog converters, sample-hold circuits, instrumentation amplifiers, low-cost modular power supplies for op amps and logic circuits.

Automation Dynamics manufactures automated, programmable, decision-making production test systems, including:
Computerized Circuit Test Systems for Complex Wiring
Tape-controlled Circuit Test Systems.
Test Sets for checking intermittant Circuits.
Component Verification Test Systems.
Computerized Logic Test Systems.
Analog Circuit Functional Test Sets.
Programmable Digital Comparators.
Custom-Designed Systems meeting industrial MIL specifications.

Microwave heating for industrial uses to improve product quality and reduce process time. Microwave heating has specific advantages in heating thermally insulating materials. If a faster or more uniform method of heating is your bottleneck, microwave heating could be your answer. Contact us for a quick appraisal.

Advertisement

CLARKE - HESS manufactures a line of Function Generators that in addition to supplying sine, square, and trianglar waves from 1mHz to 4 MHz can be amplitude and/or frequency modulated and have both synchronization and tone burst capabilities. In addition the company produces EKG preamplifier, transmission, and switching equipment as well as a tunable, phase locked, synchronous AM detector, ac microvoltmeter, and FM demodulator. The company has unique research capabilities in the field of "threshold extending" FM demodulators.

Computer Central builds special computers and digital control systems, sub-systems and components to interface with closed loop analog control systems. The Digital Controller/Interface (model 711), for instance, features a certified linear analog output range of +1999 (corresponding to +10V) representing the difference between a digital set point and a digital feedback quantity. With extenders (Model 712), numbers of any size can be compared.

COAXIAL REED SWITCHES offered by Daico Industries are unsurpassed. These rugged, long life units are available in single and multithrow designs through 1000 MHz.

DIGITALLY PROGRAMMED ATTENUATORS assure rapid, accurate operation in severe environments. Low operating current and long life are the prime design considerations.

DIODE SWITCHES and custom drivers specifically designed to maximize system performance. Daico Industries is noted for quick reaction to customer needs.

We manufacture, Design, Develop:
- Electromagnetic Delay lines fixed; variable, lumped, distributed, electrically variable.
- Filters Low-Pass, High-Pass, Band-Pass
- Inductors, Fixed, variable, toroids, electrically variable
- Oscillators, Low-Freq, modular

DGC manufactures a complete line of:

Digital Readout Systems - one, two or three-axis systems that interface to most incremental encoders. Popular options such as zero offset, preset detection, and BCD output. Data Transfer Systems - accepts data from various digital output devices, stores the data in memory, decodes the data, and presents it to a recording device. The system interfaces directly to key punches, typewriters, tape recorders, printers, paper tape punches, on line with a computer, multiplexing of more than one system.

Data Acquisition Systems - The Data Transfer is the main component in any data acquisition system. We can supply the Data Transfer as a stand alone item or the complete system.

Call the above number for quotes on specials.

Data & Telegraph coupling repeaters. Operational modes, determined by external connections, include single-line, HDX, FDX, HUB, inverse neutral, line/-computer, and computer/line.

Solid-state data & teleprinter drivers and solid-state relays with complete input/output isolation. Wide speed range.

Signal operated motor controls, remotely operated switchers, face-plate distributors, specialized power supplies, etc.

Teleprinters for export.

Digilin manufactures a complete line of low-cost 2 1/2 and 3 1/2 digit panel meters measuring DC voltage, current or resistance with no internal adjustments required. Automatic Zero adjustment and constant high input impedance featured. Award-winning multimeters, AC line or battery-operated, reading AC & DC voltage, AC & DC current and resistance. New canted housing design. Also rack-mount multimeters, A to D converters, Digital Counters.

DYNALEX is an industry leader in advanced data handling and instrumentation equipment. A complete product line of synchro and analog-to-digital converters, multiplexers, controllers and signal conditioning amplifiers is manufactured by Dynalex. These products complement the proven capability in data acquisition and control systems for commercial, industrial and defense applications.

DYONICS, INC., manufactures products and designs systems employing every new technological breakthrough and innovation in fiber optics, light sources including point source of light for enlargers and flash exciters, camera film transports, and borescopes for internal inspection. DYONICS serves industry those engaged in processing and the manufacture of processing equipment, computers, controls, and devices to inspect, photograph, scan, and count. One complete division manufactures highly specialized and innovative medical diagnostic equipment. An in-house glass drawing facility makes DYONICS a leader in fiber optic technology.

Our experienced engineers will give your design and manufacturing application the creative and specialized analysis indicative of all DYONICS work. Your specific requirements are met with a durable and efficient, custom-designed unit, manufactured with DYONICS' quality, off-the-shelf material. Fine workmanship and materials tested and evaluated constantly assure you of a superior performance system at competitive prices.

DYTRO'S Printing Digital Voltmeter (PDVM) ends transcription errors. Standard units are available with a printed output tape having 2 logging digits, sign, decimal point, and 4 1/2 digits of voltage. Accessories include a multiplexer controlled by the logging digits, limit options for use with inexperienced personnel, and electrical outputs. Printers and PDVMs are also available for OEM use with many possible variations.

We manufacture a complete line of small, precision fuses and circuit breakers for electronic and automotive applications: over 300 different types including all regular sizes and fusion characteristics. Our special, patented SERIES 02 FUSE gives a TWO-SECOND-MINIMUM TIME DELAY at the same price and size of a 3AG fuse, available in all standard current ratings. Ideal for protection of consumer or professional power supplies.

E.S.L.'s Fired-on silver, platinum, gold etc., glass bonded coatings are widely used for microelectronics circuitry, resistors, terminations capacitors, electrodes and metallized ceramics. They also make dielectric, magnetic, resistive and protective coatings. Conductive potting compounds, adhesives and other resin-based materials are standard. Multilayer and crossover dielectric coatings. Custom formulations.

Elmag Corporation manufactures to customer specifications Electromagnetic Interference Filters, High Voltage and Special Capacitors. The RFI Filters achieve the optimum in the suppression of noise from all spurious energies and can be housed in virtually any package. The High Voltage and Special Capacitors are custom fabricated to meet unique specifications for High Voltage, Multiple Sections, Close Tolerances, High Capacity and High Insulation Resistance. We welcome an opportunity to serve you.

ECL's chip carriers are approved by the E.I.A. & Mil. They are inert in material and are completely free from electrostatic charge. ECL's chip TRAYPAK is widely used for optical insp., automatic loading, test and shipping. Achieve accountability of chips after slicing. REduce your rejects from contaminates and excessive handling. TRAYPAK's are coated with either Teflon, Silicon or Electroplate. Are capable of withstanding high bonding temperatures for Molytab processes.

Locate your VHF repeater, microwave relay, telemetering system, remote control devices, TV translators, etc where they should be for most efficient functioning or propogation; independent of power lines or batteries. GI MOD. "2"-TELAN thermoelectric generators are most economical at power levels of 2 to 300 watts average. Write for MOD. "2" series Telan brochure and Telan Application Handbook (TEMAR brochure for buoy power sources). (DECAP) brochure for Cathodic Protection.

BOBBIN CORES by AUTOMATION: Square-loop magnetic cores of nickel tape, wound on supporting bobbins. Automated for precise uniformity, reproducibility and wider magnetic characteristics. Factory engineering and quick delivery for prototype or production. Low cost services, custom test, "matched sets" enhance economics for ferrite plane drivers, magnetic memories, counters, registers, modulators, mag-amps, inverters, pulse transformers, other saturating-mode devices. Economic replacement for small boxed Tapewound cores. Comprehensive design & technical data distributed free by international representatives on phone request.

Advertisement

Integrated Circuit Electronics manufactures a wide variety of numerical displays consisting of decode display and count display modules-with or without memory storage. Depending on customer readout application, we offer four configuration either employing the cold cathode discrete tube, or the segmented neon, incandescent, or flourescent types.

Advertisement

IPT Corporation manufactures production, test and assembly equipment for the semiconductor industry, both manufacturers and users. Products include photomask duplicators, automatic component test handlers, electronic test equipment, multiplexers, data loggers, wafer probes, hybrid probes, labprobes, die bonders, and modular programmable power supplies. Two types automatic component test handlers contain fluidic logic and controls to eliminate electronic noise during test cycle. Large handler tests 10,000 units/-hour at zero test time. Bench top handler tests 4,000 units/hour at zero test time.

Advertisement

Isomet Corporation manufactures a comprehensive line of Lasar accessory devices including pockels cell modulators, Q-switches and associated electronic drivers. These may be either electrooptical and utilize materials grown in Isomets own facilities. Other items include Harmonic Generation Crystals and temperature controlled ovens.
The sonics department offers a superior grade of acoustical delay lines and solid state laser beam deflectors.

Advertisement

Isotemp Research, Inc. is dedicated to precise temperature control of crystals and components using all state-of-the-art temperature sensing elements. Our specialty is low cost solid state proportional control, designed and applied to provide thermal cavities featuring fast warmup, low power drain and ultra stable temperatures. Our accent is on custom ovens--prototypes to specification delivered in 4 weeks, quotations in 48 hours. Ovens are our only business.

Coil Tester--Shorted Turn Indicator--used since 1946 by repeat and new customers. New circuit-board construction. Standard probes for unmounted coils (no iron core or brass sleeve) range in six sizes from 5/32x7/32x3-inch (detects one shorted turn of #44 copper wire in 2-inch dia. loop or #20 wire in 3-ft. dia. loop) down to 0.045x0.050x5/8-inch requiring 3 or more turns #44 to indicate a short. Non-shocking, goof-proof. Requires 5-minute warmup, 10-minute housewife training, your sample shorted turns for "calibration", and your "wire-around-probe and through donut" for toroids at reduced sensitivity. Built for squashing by Mack truck, except small (soft-iron) probes are fragile. Price $250. Shipping wt. 9 lbs.

Manufacturer of The Carson Tape Splicer, a precision machined splicing block available for all widths to tape, and of Visi-Mag, a solution for application to magnetic tapes to make visible the signals recorded on the tape. It is especially useful in trouble shooting digital magnetic tape systems, in video tape editing, in track alignment in head alignment, etc. Several types are available. Write for further information.

Advertisement

Specialists in microwave wageguide components and subsystems assemblies. Unusual custom waveguide devices fabricated to customer drawings or completely designed to customer specifications. Employing cost-saving production techniques, MCS produces in reasonable time, with no do-overs. In addition to custom capabilities a complete catalog line of microwave test equipment from 1.7 to 90 GC is available. This includes ferrite devices, slotted lines, couplers, standard gain horns, attenuators, flanges and related components.

MEASUREMENTS manufactures precision electronic test equipment widely used in the development laboratory, on the production line, and by service organizations. Instruments include standard signal generators from 20 Hz to 1,000 MHz, frequency meters, deviation meters, intermodulation meters, RF calibrators, bolometer bridges, etc. The equipment has been adopted as the standard by many diversified industries including mobile communications and the manufacture of high quality FM stereo receivers where there is exacting need for precision test instruments.

Micro tech makes a complete line of semiconductor manufacturing and assembly equipment. We stress simplicity of design consequently there are less problems with down time, and general maintenance is less complicated. We incorporate a number of unique features to attain the high degree of accuracy possible on our equipment.

MICRO-SYNCLAMPS - sub-min. synchro clamps - Timber-Top, Inc.
MICRO-T - miniature package for transistors - Motorola Semiconductor Prods., Inc.

MICRO-TEL CORP., 1406 Shoemaker Rd., Baltimore, Md., 21209, Tel: 301-823-6227; Sls. Mgr: W.R. Richardson

Advertisement

MITEQ designs and manufactures a complete line of active solid state microwave components and subsystems for use in Data Transmission, Electronic Warfare, Instrumentation, Telemetry and other microwave systems. Typical components include varactor-tuned transistor oscillators to 4 GHz, cavity-stabilized oscillators, octave and multioctave low noise transistor amplifiers to 4 GHz, low noise IF amplifiers, log IF amplifiers, mixer/preamps, stable oscillator/multiplier chains, and related components. MITEQ can supply complete RF subsystems including multichannel receivers with amplitude and/or phase tracking.

MITEY-MITE - connectors - Amphenol Ind'l. Div.

Advertisement

NCI manufactures a complete line of solid electrolyte and wet electrolyte tantalum capacitors in plastic molded and metal enclosed cases. Solid tantalum capacitors to MIL-C-39003 and wet tantalum capacitors to MIL-C-3965 and MIL-C-39006 are available from the shelf as well as from a massive electronic distributor organization. Precision molded solid tantalum capacitors in radial and axial lead configurations are manufactured on high speed equipment for the computer, industrial, and military consumer.

NRC's tone telegraph and data transmission equipment represents more than 27,000 duplex channel ends of digital Frequency Shift equipment supplied to military and industrial users throughout the world. Quality, delivery, and flexibility have been the keys to NRC's success in satisfying its customer's needs since 1946. NRC offers its experience as one of the originators in its field towards satisfying customer's requirement.

Advertisement

Parker Instrument's unique etched circuit coil produces a light weight, externally rugged meter movement. Use in panel, control, edgewise, and aerospace applications where low cost must be accompanied by reliability. Available in a wide choice of styles and ranges to fit any application. Broad Engineering background to assist in design and manufacture of special purpose instrumentation.

Specializing in microelectronic inductors and transformers, we offer fixed and tunable devices ranging in sizes smaller than transistor dice to as large as 1/3 To-5 can volume. Extended tuning range units give 10:1 tuning range. Our devices are considered the most stable in the industry irregardless of size. Present applications include sattelites, military i-f amplifiers, minature transmitters.

Pioneer Metals, Inc. manufactures a special Honeycomb for R.F.I. sheilding. This material is commonly referred to as "Copper Brazed Honeycomb", and is made from a mild steel foil .005 to .010" thick. The cell is hexagonal in shape, and is brazed with copper under vacuum or Hydrogen atmosphere. We also have facilities for contract furnace brazing and complete manufacture of component parts.
